1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Another glorious week of yanking random economic series out of the FRED vending machine and asking them, at gunpoint, whether they love each other. As always, the answer is "no," but the details are where the fun lives. Standard disclaimer before we get emotionally invested: these pairings are chosen by a dice roll, nobody here is claiming causation, and the entire enterprise is a monument to spurious correlation. Onward.

Monday kicked us off with a real crowd-pleaser: hospital and nursing care output pitted against the Nassau-Suffolk house price index. The raw regression came back with an R-squared of about 0.60 and a p-value that would make a grad student weep with joy. "Housing prices predict hospitals!" screamed nobody responsible. Then we detrended it, and the whole thing evaporated into a puff of statistical smoke – R-squared collapsed to 0.08 and the p-value strolled up to a leisurely 0.23. Turns out both series just went up over the years, like nearly everything measured in dollars or index points since 1975. Textbook trend mirage. We salute it.

Tuesday and Friday were the honest failures: government grants versus mining output deflators, and commercial distillate fuel CO2 emissions versus the discount rate. Tuesday couldn't clear significance in either the raw or detrended version, which is refreshingly consistent – no relationship, no pretending. Friday, amusingly, was flat as a pancake raw (p around 0.36) but then squeaked into "significant" territory once detrended (p about 0.04, R-squared a modest 0.14). So carbon emissions and interest rates apparently have a faint, weak little something once you strip the trends – or, more likely, that's exactly the kind of borderline coincidence you find when you run enough of these before breakfast.

The genuinely interesting cases were Wednesday and Thursday, because they held up. Canadian recession indicators versus the San Francisco Tech Pulse stayed strongly significant in both raw and detrended forms – which actually makes a lick of sense, since tech output tends to sag when the economy is face-planting, and recessions are contagious across borders. And Thursday's share of mortgages held by the top 1% versus net government investment depreciation went from a wishy-washy raw result to a genuinely robust detrended one (R-squared jumped to 0.33, p down to 0.005). I have no coherent story for why the wealthiest slice's mortgage share should track government equipment depreciation, and I'm not going to invent one, because the responsible thing to do is shrug, note that this is two random series drawn from a hat, and move along before someone quotes me in a policy memo.

2 Date: 2026-08-18

Series ID: USHSPTLNRSQGSP

This series is titled Quantity Indexes for Real Gross Domestic Product by Industry: Private Industries: Educational Services, Health Care, and Social Assistance: Health Care and Social Assistance: Hospitals and Nursing and Residential Care Facilities for United States (DISCONTINUED) and has a frequency of Annual. The units are Index 2009=100 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1997-01-01 and the observation end date is 2016-01-01.The popularity of this series is 1.

Series ID: ATNHPIUS35004Q

This series is titled All-Transactions House Price Index for Nassau County-Suffolk County, NY (MSAD) and has a frequency of Quarterly. The units are Index 1995:Q1=100 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1975-07-01 and the observation end date is 2026-01-01.The popularity of this series is 21.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_ATNHPIUS35004Q	**R-squared:**	0.595
Model:	OLS	**Adj. R-squared:**	0.573

3 Date: 2026-08-19

Series ID: BOPGG

This series is titled U.S. Government Grants Excluding Military (DISCONTINUED) and has a frequency of Quarterly. The units are Billions of Dollars and the seasonal adjustment is Seasonally Adjusted.The observation start date is 1960-01-01 and the observation end date is 2014-01-01.The popularity of this series is 1.

Series ID: IPUBN212T051000000

This series is titled Sectoral Output Price Deflator for Mining: Mining (Except Oil and Gas) (NAICS 212) in the United States and has a frequency of Annual. The units are Percent Change from Year Ago and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1988-01-01 and the observation end date is 2025-01-01.The popularity of this series is 1.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_IPUBN212T051000000	**R-squared:**	0.117
Model:	OLS	**Adj. R-squared:**	0.082
Method:	Least Squares	**F-statistic:**	3.328

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

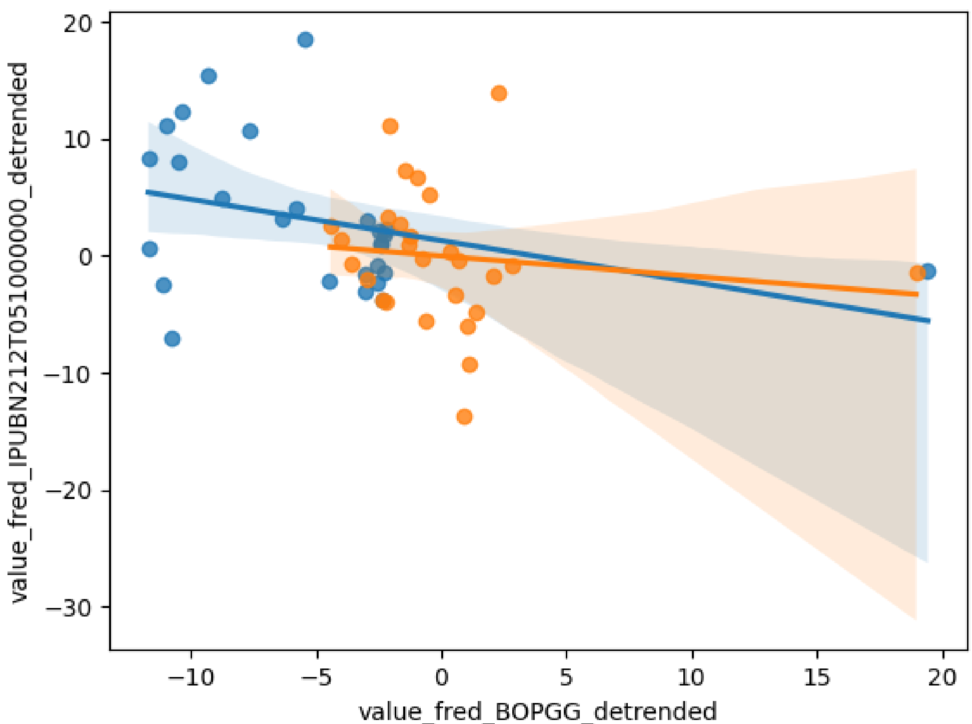

Figure 4: Detrended Regression Plot for 2026-08-19

4 Date: 2026-08-20

Series ID: CANRECM

This series is titled OECD based Recession Indicators for Canada from the Peak through the Trough (DISCONTINUED) and has a frequency of Monthly. The units are +1 or 0 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1960-02-01 and the observation end date is 2022-09-01.The popularity of this series is 9.

Series ID: SFTPAGRM158SFRBSF

This series is titled San Francisco Tech Pulse (DISCONTINUED) and has a frequency of Monthly. The units are Percent Change at Annual Rate and the seasonal adjustment is Seasonally Adjusted.The observation start date is 1971-05-01 and the observation end date is 2020-03-01.The popularity of this series is 6.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_SFTPAGRM158SFRBSF	**R-squared:**	0.070
Model:	OLS	**Adj. R-squared:**	0.068
Method:	Least Squares	**F-statistic:**	43.81
Date:	Thu, 20 Aug 2026	**Prob (F-statistic):**	8.18e-11
Time:	12:21:40	**Log-Likelihood:**	184.44
