1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly parade of statistical nonsense, where a robot pulls two economic time series out of a hat and demands they explain each other. As always, the correct amount of meaning to extract from any of this is zero, but we will spend several paragraphs extracting it anyway because that is the entire bit.

Monday kicked things off by pairing Coinbase Bitcoin with the San Francisco Tech Pulse index, and the raw regression came in absolutely radiant – an R-squared near 0.70 and a p-value with more zeros in front of it than I care to count. "Bitcoin explains tech vibes!" screamed nobody responsible. Then we detrended it, and the R-squared collapsed to a limp 0.14. It survived, technically, in the sense that a soufflé survives being dropped, but that gorgeous raw fit was mostly two things drifting upward in the same era holding hands. Classic trend mirage, exactly the kind of thing this project exists to point at and laugh.

Then the week decided to humble us. Tuesday's Philadelphia capital-expenditures diffusion index versus the M2M user cost index produced a p-value of 0.89 – the statistical equivalent of a shrug so total it echoes. Wednesday's Italian central bank forex interventions versus real-estate loan delinquencies flashed a "significant" raw result (p around 0.04) that promptly evaporated to 0.35 once detrended, another mirage caught red-handed. Thursday paired a recession indicator with the current account balance and got an R-squared of 0.005, which is roughly the correlation between my horoscope and my day. And Saturday's exports-to-newly-industrialized-countries versus state-and-local government's share of GDP gave us the week's spiciest twist: significant in the raw AND significant detrended, except the slope flips sign between the two. Truly nothing says "genuine relationship" like a coefficient that cannot decide which direction it points.

The two standouts actually worth a raised eyebrow: Friday, where U.S. CPI for nondurables squared off against French dwelling construction starts, held up after detrending (p around 0.04) – weak, but it didn't just vanish. And Sunday's forestry-and-fishing corporate dividends versus a discontinued CPI variant posted a glorious raw R-squared of 0.85, and even after ripping out the shared trend it clung to a respectable 0.36 and stayed significant. Do net dividends from America's fishing sector secretly track medical-care-excluding inflation in "Size Class D"? Almost certainly not, and I beg you not to trade on it. These are randomly paired series with no theory, no causal story, and no statistical rigor beyond "the line goes through the dots-ish." Spurious correlation is the house specialty here, not the exception – so enjoy the pretty numbers, and then immediately forget them. See you next week for more.

2 Date: 2026-08-03

Series ID: CBBTCUSD

This series is titled Coinbase Bitcoin and has a frequency of Daily, 7-Day. The units are U.S. Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2014-12-01 and the observation end date is 2026-08-02.The popularity of this series is 75.

Series ID: SFTPINDM114SFRBSF

This series is titled San Francisco Tech Pulse (DISCONTINUED) and has a frequency of Monthly. The units are Index Jan 2000=100 and the seasonal adjustment is Seasonally Adjusted.The observation start date is 1971-04-01 and the observation end date is 2020-03-01.The popularity of this series is 10.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_SFTPINDM114SFRBSF	**R-squared:**	0.695
Model:	OLS	**Adj. R-squared:**	0.690
Method:	Least Squares	**F-statistic:**	139.1
Date:	Mon, 03 Aug 2026	**Prob (F-statistic):**	2.21e-17
Time:	14:09:51	**Log-Likelihood:**	-185.92
No. Observations:	63	**AIC:**	375.8
Df Residuals:	61	**BIC:**	380.1
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P>|t|**	**[0.025**	**0.975]**

Kurtosis:	1.681	**Cond. No.**	7.52

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

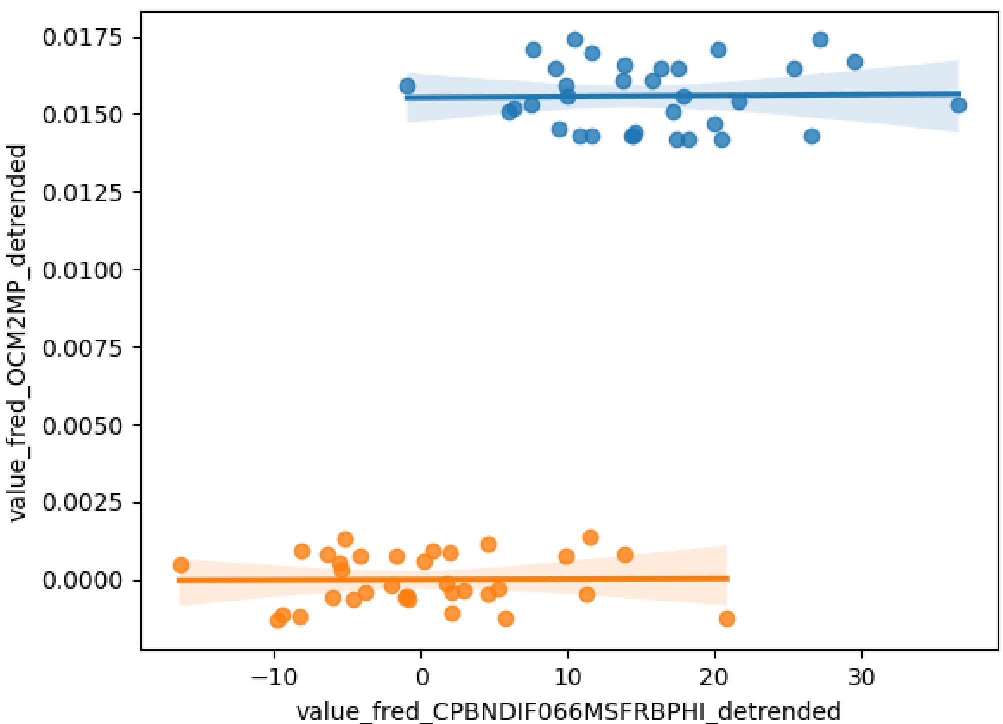

Figure 4: Detrended Regression Plot for 2026-08-04

4 Date: 2026-08-05

Series ID: ITINTDRES
This series is titled Italian Intervention: Banca d'Italia Purchases of Foreign Exchange (Millions of ECU's, Euros after 1999) (DISCONTINUED) and has a frequency of Daily, 7-Day. The units are Millions of ECU's, Euros after 1999 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1988-01-01 and the observation end date is 1998-12-31.The popularity of this series is 2.

Series ID: DRSRET100N
This series is titled Delinquency Rate on Loans Secured by Real Estate, Banks Ranked 1st to 100th Largest in Size by Assets and has a frequency of Quarterly, End of Period. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1987-01-01 and the observation end date is 2026-01-01.The popularity of this series is 1.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_DRSRET100N	**R-squared:**	0.095
Model:	OLS	**Adj. R-squared:**	0.074
Method:	Least Squares	**F-statistic:**	4.433

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

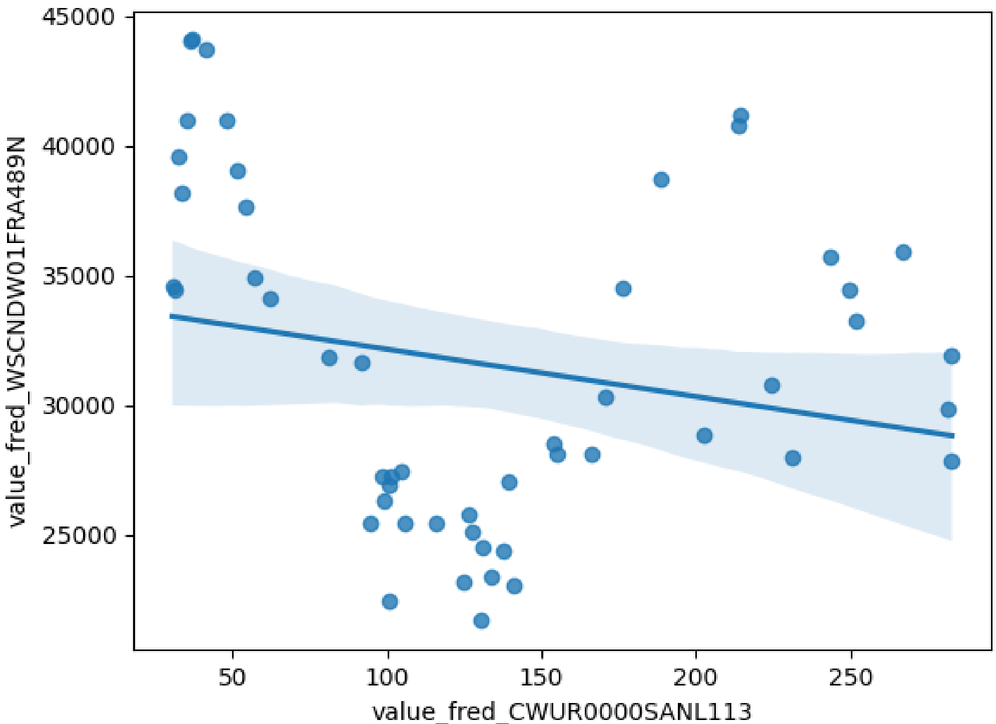

Figure 11: Raw Regression Plot for 2026-08-08

7.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_WSCNDW01FRA489N_detrended	**R-squared:**	0.082
Model:	OLS	**Adj. R-squared:**	0.064

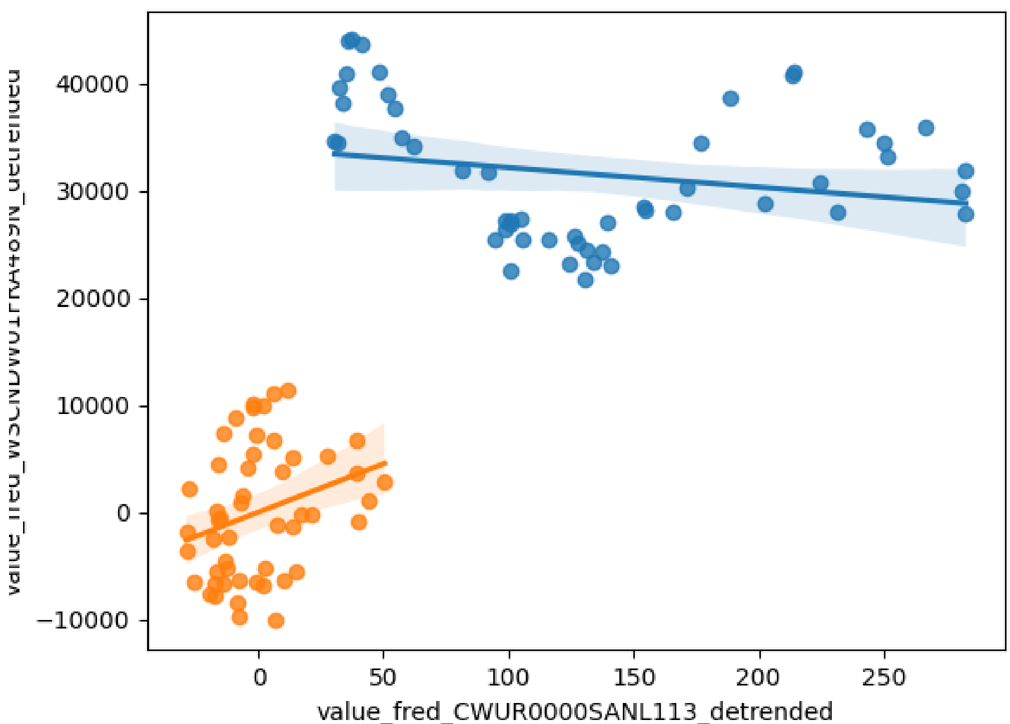

Figure 12: Detrended Regression Plot for 2026-08-08

8 Date: 2026-08-09

Series ID: N3305C0A144NBEA

This series is titled Net corporate dividends: Domestic industries: Forestry, fishing, and related activities and has a frequency of Annual. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1998-01-01 and the observation end date is 2022-01-01.The popularity of this series is 1.

Series ID: CUUSD000SA0L5

This series is titled Consumer Price Index for All Urban Consumers: All Items Less Medical Care in Size Class D (DISCONTINUED) and has a frequency of Semiannual. The units are Index 1982-1984=100 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1984-01-01 and the observation end date is 2017-07-01.The popularity of this series is 1.

8.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_CUUSD000SA0L5	**R-squared:**	0.845
Model:	OLS	**Adj. R-squared:**	0.837
Method:	Least Squares	**F-statistic:**	98.42
Date:	Sun, 09 Aug 2026	**Prob (F-statistic):**	1.01e-08
Time:	12:22:58	**Log-Likelihood:**	-73.000

value_fred_N3305C0A144NBEA	0.0385	0.004	9.921	0.000	0.030	0.047

Omnibus:	0.145	**Durbin-Watson:**	1.621
Prob(Omnibus):	0.930	**Jarque-Bera (JB):**	0.251
Skew:	-0.170	**Prob(JB):**	0.882
Kurtosis:	2.569	**Cond. No.**	4.82e+03

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 4.82e+03. This might indicate that there are strong multicollinearity or other numerical problems.
