1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly ritual where we shove two economic time series that have never met into a blender and ask the resulting smoothie to explain itself. As always, the machine picked these pairs at random, nobody hypothesized anything, and any relationship you see is best understood as a cosmic coincidence wearing a lab coat. Let's marvel at the mundane together.

Monday, August 31, opened with a real tearjerker: a discontinued SBA loan series that gave up on life in 2017 got paired with the Ft. Lauderdale house price index, which has been faithfully tracking Florida real estate since disco was relevant. The raw regression produced an R-squared of 0.05 and a p-value of 0.33, which in technical terms means "the model shrugged." Then the detrended version nudged things ever so slightly upward to an R-squared of 0.10 with a p-value of 0.18 – still nowhere near significant, but slightly less pathetic. So congratulations to nobody: this pairing achieved the rare feat of being uninteresting in both incarnations. Truly a series that quit its job in 2017 has nothing meaningful to say about Florida condos. Who could have foreseen it.

September 2 is where the plot thickens, and by "thickens" I mean "thins dramatically upon inspection." Aggregate weekly hours in durable goods manufacturing got hitched to demand deposits from foreign official institutions (also discontinued, because this project apparently runs a hospice for retired data series). The raw regression came back significant – p-value of 0.006, hold the applause – suggesting a genuine relationship to the untrained and hopeful eye. But then we detrended it, and the whole thing evaporated so fast it left skid marks: R-squared collapsed to 0.0003 and the p-value ballooned to 0.82. This, dear reader, is the textbook trend mirage this project exists to mock. Two lines drifting in the same general direction over decades, mistaken for romance. Strip out the shared drift and there's absolutely nothing there. Beautiful. Chef's kiss.

Finally, September 3 gave us imports of non-manufactured goods to the U.S. Virgin Islands versus Dutch services business confidence, a pairing so geographically and thematically unhinged I'm surprised the software didn't file a complaint. The raw regression was a dud (p-value 0.59), but the detrended version actually did something: p-value of 0.014, technically significant, with a modest R-squared of 0.027. So here's the fun twist – it's the only pairing this week that got stronger after detrending rather than dying, which by the wretched standards of this project makes it the "notable" result. Do I believe Virgin Islands cargo manifests are secretly wired to the mood of Dutch service-sector managers? Absolutely not, and neither should you; an R-squared of 0.027 explains roughly nothing and a random search across enough series will cough up a 0.014 p-value eventually just to keep things spicy. But it holds up better than a shared trend,

so it earns a polite golf clap before we forget it forever. Same time next week, same disclaimer: nothing here means anything, and that's the whole point.

2 Date: 2026-08-31

Series ID: EBZMNQ

This series is titled Percent of Value of Loans, Small Business Administration (SBA) Backed for Zero Interval, Moderate Risk, All Commercial Banks (DISCONTINUED) and has a frequency of Quarterly, 2nd Month's 1st Full Week. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2012-07-01 and the observation end date is 2017-04-01. The popularity of this series is 1.

Series ID: ATNHPIUS22744Q

This series is titled All-Transactions House Price Index for Ft. Lauderdale-Pompano Beach-Sunrise, FL (MSAD) and has a frequency of Quarterly. The units are Index 1995:Q1=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1975-10-01 and the observation end date is 2026-04-01. The popularity of this series is 14.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_ATNHPIUS22744Q	R-squared:	0.054			
Model:	OLS	Adj. R-squared:	0.001			
Method:	Least Squares	F-statistic:	1.023			
Date:	Mon, 31 Aug 2026	Prob (F-statistic):	0.325			
Time:	18:19:31	Log-Likelihood:	-95.885			
No. Observations:	20	AIC:	195.8			
Df Residuals:	18	BIC:	197.8			
Df Model:	1

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 1: Raw Regression Plot for 2026-08-31

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_ATNHPIUS22744Q_detrended	R-squared:	0.096
Model:	OLS	Adj. R-squared:	0.045
Method:	Least Squares	F-statistic:	1.904
Date:	Mon, 31 Aug 2026	Prob (F-statistic):	0.185
Time:	18:19:31	Log-Likelihood:	-47.327
No. Observations:	20	AIC:	98.65
Df Residuals:	18	BIC:	100.6
Df Model:	1

Skew:	-0.424	Prob(JB):	0.738
Kurtosis:	2.893	Cond. No.	2.71

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 2: Detrended Regression Plot for 2026-08-31

3 Date: 2026-09-02

Series ID: CEU3100000016

This series is titled Indexes of Aggregate Weekly Hours of All Employees, Durable Goods and has a frequency of Monthly. The units are Index 2007=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2006-03-01 and the observation end date is 2026-07-01. The popularity of this series is 1.

Series ID: DDDFOINS

This series is titled Demand Deposits at Banks Due to Foreign Official Institutions (DISCONTINUED) and has a frequency of Monthly. The units are Billions of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1959-01-01 and the observation end date is 2021-01-01. The popularity of this series is 2.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_DDDFOINS	R-squared:	0.042			
Model:	OLS	Adj. R-squared:	0.036			
Method:	Least Squares	F-statistic:	7.715			
Date:	Wed, 02 Sep 2026	Prob (F-statistic):	0.00607			
Time:	15:25:54	Log-Likelihood:	-715.97			
No. Observations:	179	AIC:	1436.			
Df Residuals:	177	BIC:	1442.			
Df Model:	1					
Covariance Type:	nonrobust					
	coef	std err	t	P> t	[0.025	0.975]
const	55.3897	14.155	3.913	0.000	27.455	83.325
value_fred_CEU3100000016	-0.4390	0.158	-2.778	0.006	-0.751	-0.127
Omnibus:	30.591	Durbin-Watson:	0.012			
Prob(Omnibus):	0.000	Jarque-Bera (JB):	40.300			
Skew:	1.071	Prob(JB):	1.77e-09			
Kurtosis:	3.905	Cond. No.	1.28e+03			

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 1.28e+03. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 3: Raw Regression Plot for 2026-09-02

3.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_DDDFOINS_detrended	R-squared:	0.000
Model:	OLS	Adj. R-squared:	-0.005
Method:	Least Squares	F-statistic:	0.05396
Date:	Wed, 02 Sep 2026	Prob (F-statistic):	0.817
Time:	15:25:54	Log-Likelihood:	-568.24
No. Observations:	179	AIC:	1140.
Df Residuals:	177	BIC:	1147.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	-1.765e-14	0.435	-4.06e-14	1.000	-0.858	0.858
value_fred_CEU3100000016_detrended	-0.0165	0.071	-0.232	0.817	-0.157	0.124

Omnibus:	69.935	Durbin-Watson:	0.069
Prob(Omnibus):	0.000	Jarque-Bera (JB):	182.593
Skew:	1.695	Prob(JB):	2.24e-40
Kurtosis:	6.605	Cond. No.	6.13

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 4: Detrended Regression Plot for 2026-09-02

4 Date: 2026-09-03

Series ID: IMPNONVI

This series is titled Imports of Goods: Non-Manufactured Commodities for U.S. Virgin Islands and has a frequency of Monthly. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2008-01-01 and the observation end date is 2026-07-01. The popularity of this series is 1.

Series ID: BVCICP02NLM460S

This series is titled Business Tendency Surveys: Composite Business Confidence: Economic Activity: Services for Netherlands and has a frequency of Monthly. The units are Percentage balance and the seasonal adjustment is Seasonally Adjusted. The observation start date is 1996-01-01 and the observation end date is 2026-06-01. The popularity of this series is 1.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_BVCICP02NLM460S	R-squared:	0.001
Model:	OLS	Adj. R-squared:	-0.003
Method:	Least Squares	F-statistic:	0.2940
Date:	Thu, 03 Sep 2026	Prob (F-statistic):	0.588
Time:	15:18:46	Log-Likelihood:	-880.07
No. Observations:	222	AIC:	1764.
Df Residuals:	220	BIC:	1771.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
