1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly parade of economic non-sequiturs, where a computer grabs two time series that have never met, forces them to sit next to each other, and we all pretend to be shocked by the results. This week we paired inflation with a discontinued interest rate, Swiss currency intervention with unfilled airplane orders, Asian air freight with fast-food job listings, and, in the grand finale, telephone-service prices with rich people's deposits. Truly, the questions humanity has always yearned to ask.

Let us begin with Monday's headliner: services inflation versus the tragically deceased 1-Week AMERIBOR rate. The raw regression came roaring in with an R-squared of 0.93, which if you didn't know better would look like the discovery of the century. But of course both of these things drift over time, so the real test is the detrended version, where the relationship politely deflates to an R-squared of about 0.23 – still technically "significant," but more of a limp handshake than the crushing embrace the raw numbers promised. Classic trend mirage, only partially debunked. Then Tuesday happened, and the model tried to relate Swiss National Bank dollar purchases to unfilled transportation-equipment orders, only to discover the input series was apparently a flat line of zeros, producing an R-squared of roughly 0.0000000000000003 and enough "smallest eigenvalue is 0" warnings to make the software file a complaint. We regressed nothing on something and got, appropriately, nothing.

Midweek offered the reliable comfort of statistical failure. Asian air freight prices versus food-service job postings mustered a raw R-squared of 0.02 and a p-value that shrugged, and the detrended version somehow tried even less. Wednesday's loan sizes versus real gross domestic income were, frankly, indifferent to each other in both the raw and detrended runs – a rare case of two series that agree they have nothing to say. And Thursday's top-0.1%-loan-share versus Czech consumer pessimism achieved that beautiful "nope in both columns" symmetry, the kind of clean null result that reminds you the universe usually isn't hiding a secret.

But save your applause for Friday, because we actually found one worth pointing at. The Producer Price Index for residential local telephone service versus the deposit share held by the merely-very-rich (90th to 99th percentile) put up a modest raw R-squared of 0.12 – and then, plot twist, the detrended version got stronger, climbing to about 0.41 with a wildly tiny p-value and even flipping to a negative relationship. That is genuinely the interesting case: a link that survives having its shared trend surgically removed, which is the closest this project ever gets to "huh, maybe." I have no earthly theory for why landline phone prices should move opposite to affluent deposit shares, and I want to be crystal clear that I am not proposing one. This is,

as always, a machine blindly pairing random data with zero causal claim and no statistical rigor worth defending; spurious correlation is the house specialty here, not the exception. Friday just happened to produce a correlation that's spurious with slightly better production values. See you next week for more.

2 Date: 2026-08-10

Series ID: SUUR0000SAS

This series is titled Chained Consumer Price Index for All Urban Consumers: Services in U.S. City Average and has a frequency of Monthly. The units are Index Dec 1999=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1999-12-01 and the observation end date is 2026-06-01. The popularity of this series is 3.

Series ID: AMBOR1W

This series is titled 1-Week AMERIBOR Term Structure of Interest Rates (DISCONTINUED) and has a frequency of Daily. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2021-06-20 and the observation end date is 2023-12-27. The popularity of this series is 2.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_AMBOR1W	R-squared:	0.930
Model:	OLS	Adj. R-squared:	0.927
Method:	Least Squares	F-statistic:	319.1
Date:	Mon, 10 Aug 2026	Prob (F-statistic):	2.29e-15
Time:	12:39:09	Log-Likelihood:	-23.378
No. Observations:	26	AIC:	50.76
Df Residuals:	24	BIC:	53.27
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t 	[0.025	0.975]
const	-50.4524	2.976	-16.953	0.000	-56.595	-44.310

Omnibus:	3.117	Durbin-Watson:	0.261
Prob(Omnibus):	0.210	Jarque-Bera (JB):	2.425
Skew:	-0.614	Prob(JB):	0.297
Kurtosis:	2.147	Cond. No.	4.58e+03

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 4.58e+03. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 1: Raw Regression Plot for 2026-08-10

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_AMBOR1W_detrended	R-squared:	0.227
Model:	OLS	Adj. R-squared:	0.195
Method:	Least Squares	F-statistic:	7.062
Date:	Mon, 10 Aug 2026	Prob (F-statistic):	0.0138
Time:	12:39:09	Log-Likelihood:	-23.173

Omnibus:	3.443	Durbin-Watson:	0.285
Prob(Omnibus):	0.179	Jarque-Bera (JB):	3.012
Skew:	-0.790	Prob(JB):	0.222
Kurtosis:	2.467	Cond. No.	1.16

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 2: Detrended Regression Plot for 2026-08-10

3 Date: 2026-08-12

Series ID: CHINTDUSDDM

This series is titled Swiss Intervention: Swiss National Bank Purchases of USD against DEM (Millions of USD) and has a frequency of Daily, 7-Day. The units are Millions of USD and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1975-01-01 and the observation end date is 1998-12-31. The popularity of this series is 2.

Series ID: U36SUS

This series is titled Manufacturers' Unfilled Orders to Shipments Ratios: Transportation Equipment and has a frequency of Monthly. The units are Ratio and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1992-01-01 and the observation end date is 2026-06-01. The popularity of this series is 1.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_U36SUS	R-squared:	0.000
Model:	OLS	Adj. R-squared:	0.000
Method:	Least Squares	F-statistic:	nan
Date:	Wed, 12 Aug 2026	Prob (F-statistic):	nan
Time:	12:39:50	Log-Likelihood:	-151.34

Skew:	1.266	Prob(JB):	9.44e-07
Kurtosis:	4.233	Cond. No.	inf

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The smallest eigenvalue is 0. This might indicate that there are strong multicollinearity problems or that the design matrix is singular.

Figure 4: Detrended Regression Plot for 2026-08-12

4 Date: 2026-08-13

Series ID: IV1312

This series is titled Import Price Index (Balance of Payments): Air Freight for Asia and has a frequency of Monthly. The units are Index 2000=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1990-09-01 and the observation end date is 2026-06-01. The popularity of this series is 3.

Series ID: IHLIDXUSTPFOPRSE

This series is titled Food Preparation and Service Job Postings on Indeed in the United States and has a frequency of Daily, 7-Day. The units are Index Feb, 1 2020=100 and the seasonal adjustment is Seasonally Adjusted. The observation start date is 2020-02-01 and the observation end date is 2026-08-07. The popularity of this series is 6.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_IHLIDXUSTPFOPRSE	R-squared:	0.023
Model:	OLS	Adj. R-squared:	0.010
Method:	Least Squares	F-statistic:	1.750
Date:	Thu, 13 Aug 2026	Prob (F-statistic):	0.190
Time:	12:40:03	Log-Likelihood:	-335.82

Kurtosis:	2.825	Cond. No.	51.1

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 6: Detrended Regression Plot for 2026-08-13

5 Date: 2026-08-14

Series ID: EAMLXDBNQ

This series is titled Average Loan Size for 31 to 365 Days, Low Risk, Domestic Banks (DISCONTINUED) and has a frequency of Quarterly, 2nd Month's 1st Full Week. The units are Thousands of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1997-04-01 and the observation end date is 2017-04-01. The popularity of this series is 1.

Series ID: A261RL1Q225SBEA

This series is titled Real Gross Domestic Income and has a frequency of Quarterly. The units are Percent Change from Preceding Period and the seasonal adjustment is Seasonally Adjusted Annual Rate. The observation start date is 1947-04-01 and the observation end date is 2026-01-01. The popularity of this series is 27.

5.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_A261RL1Q225SBEA	R-squared:	0.020			
Model:	OLS	Adj. R-squared:	0.008

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 11: Raw Regression Plot for 2026-08-16

7.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_WFRBSDEN09_detrended	R-squared:	0.406
Model:	OLS	Adj. R-squared:	0.401
Method:	Least Squares	F-statistic:	82.82
Date:	Sun, 16 Aug 2026	Prob (F-statistic):	2.24e-15
Time:	12:14:38	Log-Likelihood:	-217.79
No. Observations:	123	AIC:	439.6
Df Residuals:	121	BIC:	445.2
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	5.594e-13	0.129	4.33e-12	1.000	-0.256	0.256
value_fred_PCU517311517311111_detrended	-0.1489	0.016	-9.100	0.000	-0.181	-0.116

Omnibus:	13.682	Durbin-Watson:	0.048
Prob(Omnibus):	0.001	Jarque-Bera (JB):	15.396
Skew:	0.841	Prob(JB):	0.000454
Kurtosis:	2.578	Cond. No.	7.90

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.
