1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to another thrilling week of pointing a random-number cannon at the Federal Reserve's data warehouse and reporting whatever falls out. As always, none of these pairings mean anything, nobody chose them on purpose, and any relationship you see is roughly as meaningful as finding your birthday in the digits of pi. But we plotted it anyway, because that is the whole point of this deeply reasonable exercise.

Monday kicked us off with the House Price Index for Oxnard-Thousand Oaks-Ventura, California, valiantly squared off against a discontinued measure of financial-business equipment investment. The raw regression came out swinging with an R-squared of 0.87, which, if you didn't know better, would make you scream "EUREKA, Ventura housing IS financial equipment spending!" and immediately book a flight. Then we detrended it and the R-squared face-planted to 0.23. Translation: two things that both drifted upward for decades, high-fiving as they passed in the night. A textbook trend mirage, and honestly the exact species of nonsense this project exists to mock.

Tuesday's clash between San Luis Obispo house prices and a discontinued prime-loan-share series was the anti-climax of the century: not significant raw, not significant detrended, R-squared hovering around a rounding error. A rare instance of the data politely admitting it has nothing to say. Wednesday tried harder, pitting distillate fuel commercial CO2 emissions against Japanese retail stock surveys. The raw fit was a respectable 0.48, and here's the fun twist – the detrended version stayed significant, and the sign flipped negative. So even after stripping out the shared drift, something wiggly refuses to fully die. Do I think carbon emissions from heating oil secretly whisper to Japanese retail inventory managers? Absolutely not. But I am contractually obligated to note it survived detrending, which makes it this week's most suspicious overachiever.

Thursday paired U.S. Assets against Asian business confidence, and both raw and detrended came back significant, though with coefficients so microscopic (and a scary condition-number warning waving its arms in the background) that I'd trust it about as far as I can throw a covariance matrix. Then Friday's finale: an emerging-markets corporate bond index versus the price of piped gas service. The raw regression looked gorgeous at R-squared 0.73, practically a soul-mate situation – until detrending dragged it down to 0.06 and rendered it gloriously insignificant, another romance that existed only because both lines happened to be walking uphill. So there you have it: a couple of trend-fueled flings, one genuinely stubborn oddball, and a whole lot of statistical theater. Please continue to draw zero conclusions, and I'll see you next week.

2 Date: 2026-09-14

Series ID: ATNHPIUS37100Q

This series is titled All-Transactions House Price Index for Oxnard-Thousand Oaks-Ventura, CA (MSA) and has a frequency of Quarterly. The units are Index 1995:Q1=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1976-04-01 and the observation end date is 2026-04-01. The popularity of this series is 6.

Series ID: FBGFIEQ027S

This series is titled Financial business; gross fixed investment, nonresidential equipment, software, and structures, Flow (DISCONTINUED) and has a frequency of Quarterly. The units are Millions of Dollars and the seasonal adjustment is Seasonally Adjusted Annual Rate. The observation start date is 1946-10-01 and the observation end date is 2017-10-01. The popularity of this series is 1.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_FBGFIEQ027S	R-squared:	0.870			
Model:	OLS	Adj. R-squared:	0.869			
Method:	Least Squares	F-statistic:	1103.			
Date:	Mon, 14 Sep 2026	Prob (F-statistic):	5.84e-75			
Time:	17:07:08	Log-Likelihood:	-1926.0			
No. Observations:	167	AIC:	3856.			
Df Residuals:	165	BIC:	3862.

Figure 1: Raw Regression Plot for 2026-09-14

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_FBGFIEQ027S_detrended	R-squared:	0.233
Model:	OLS	Adj. R-squared:	0.228
Method:	Least Squares	F-statistic:	50.05
Date:	Mon, 14 Sep 2026	Prob (F-statistic):	4.06e-11
Time:	17:07:08	Log-Likelihood:	-1814.4

Skew:	-0.248	Prob(JB):	0.270
Kurtosis:	3.361	Cond. No.	35.2

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 2: Detrended Regression Plot for 2026-09-14

3 Date: 2026-09-15

Series ID: ATNHPIUS42020Q

This series is titled All-Transactions House Price Index for San Luis Obispo-Paso Robles, CA (MSA) and has a frequency of Quarterly. The units are Index 1995:Q1=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1977-10-01 and the observation end date is 2026-04-01. The popularity of this series is 8.

Series ID: EARPRXDBNQ

This series is titled Percent of Value of Loans Prime Based by Average Loan Size (\$ thousands), Prime, Domestic Banks (DISCONTINUED) and has a frequency of Quarterly, 2nd Month's 1st Full Week. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1997-04-01 and the observation end date is 2017-04-01. The popularity of this series is 1.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_EARPRXDBNQ	R-squared:	0.039
Model:	OLS	Adj. R-squared:	0.027
Method:	Least Squares	F-statistic:	3.241
Date:	Tue, 15 Sep 2026	Prob (F-statistic):	0.0756
Time:	15:46:24	Log-Likelihood:	-364.17
No. Observations:	81	AIC:	732.3

Prob(Omnibus):	0.429	Jarque-Bera (JB):	1.096
Skew:	0.241	Prob(JB):	0.578
Kurtosis:	3.303	Cond. No.	46.1

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 4: Detrended Regression Plot for 2026-09-15

4 Date: 2026-09-16

Series ID: EMISSCO2VDFCCBA

This series is titled Distillate Fuel Commercial Sector Carbon Dioxide Emissions and has a frequency of Annual. The units are Million Metric Tons CO2 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1973-01-01 and the observation end date is 2024-01-01. The popularity of this series is 1.

Series ID: BRVSLV02JPQ460S

This series is titled Business Tendency Surveys: Volume of Stocks: Economic Activity: Retail Trade, Except of Motor Vehicles and Motorcycles: Current for Japan and has a frequency of Quarterly. The units are Percentage balance and the seasonal adjustment is Seasonally Adjusted. The observation start date is 1990-10-01 and the observation end date is 2026-04-01. The popularity of this series is 1.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_BRVSLV02JPQ460S	R-squared:	0.481
Model:	OLS	Adj. R-squared:	0.465
Method:	Least Squares	F-statistic:	29.65
Date:	Wed, 16 Sep 2026	Prob (F-statistic):	5.44e-06
Time:	15:39:06	Log-Likelihood:	-112.36

Kurtosis:	3.947	Cond. No.	1.93

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 6: Detrended Regression Plot for 2026-09-16

5 Date: 2026-09-17

Series ID: IIPUSASSQ

This series is titled U.S. Assets and has a frequency of Quarterly, End of Period. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2006-01-01 and the observation end date is 2026-01-01. The popularity of this series is 10.

Series ID: BSCICP035AM665S

This series is titled Composite Leading Indicators: Composite Business Confidence Amplitude Adjusted for Major Five Asia Economies and has a frequency of Monthly. The units are Normalised (Normal=100) and the seasonal adjustment is Seasonally Adjusted. The observation start date is 2000-02-01 and the observation end date is 2023-12-01. The popularity of this series is 1.

5.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_BSCICP035AM665S	R-squared:	0.083
Model:	OLS	Adj. R-squared:	0.070
Method:	Least Squares	F-statistic:	6.363
Date:	Thu, 17 Sep 2026	Prob (F-statistic):	0.0139
Time:	15:45:16	Log-Likelihood:	-123.79
No. Observations:	72	AIC:	251.6
Df Residuals:	70	BIC:	256.1
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	101.6727	0.802	126.848	0.000	100.074	103.271
value_fred_IIPUSASSQ	-8.045e-08	3.19e-08	-2.522	0.014	-1.44e-07	-1.68e-08

Omnibus:	13.288	Durbin-Watson:	0.449
Prob(Omnibus):	0.001	Jarque-Bera (JB):	16.146
Skew:	-0.826	Prob(JB):	0.000312
Kurtosis:	4.628	Cond. No.	1.25e+08

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 1.25e+08. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 7: Raw Regression Plot for 2026-09-17

5.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_BSCICP035AM665S_detrended	R-squared:	0.178
Model:	OLS	Adj. R-squared:	0.167
Method:	Least Squares	F-statistic:	15.21
Date:	Thu, 17 Sep 2026	Prob (F-statistic):	0.000219
Time:	15:45:16	Log-Likelihood:	-112.66
No. Observations:	72	AIC:	229.3
Df Residuals:	70	BIC:	233.9
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	-2.082e-12	0.138	-1.51e-11	1.000	-0.276	0.276
value_fred_IIPUSASSQ_detrended	3.494e-07	8.96e-08	3.900	0.000	1.71e-07	5.28e-07

Omnibus:	26.580	Durbin-Watson:	0.538
Prob(Omnibus):	0.000	Jarque-Bera (JB):	53.882
Skew:	-1.260	Prob(JB):	1.99e-12
Kurtosis:	6.407	Cond. No.	1.54e+06

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 1.54e+06. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 8: Detrended Regression Plot for 2026-09-17

6 Date: 2026-09-18

Series ID: BAMLEMHGHGLCRPIUSTRIV

This series is titled ICE BofA High Grade US Emerging Markets Liquid Corporate Plus Index Total Return Index Value and has a frequency of Daily. The units are Index and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2023-09-19 and the observation end date is 2026-09-17. The popularity of this series is 2.

Series ID: CUUR0000SEHF02

This series is titled Consumer Price Index for All Urban Consumers: Utility (Piped) Gas Service in U.S. City Average and has a frequency of Monthly. The units are Index 1982-1984=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1935-03-01 and the observation end date is 2026-08-01. The popularity of this series is 9.

6.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_CUUR0000SEHF02	R-squared:	0.732
Model:	OLS	Adj. R-squared:	0.717
Method:	Least Squares	F-statistic:	49.05
Date:	Fri, 18 Sep 2026	Prob (F-statistic):	1.54e-06
Time:	15:17:42	Log-Likelihood:	-71.934
