1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly parade of economic time series that have never met each other, were never meant to meet each other, and yet were forcibly introduced by a computer that regrets nothing. As always, the ground rules: we yank two series out of FRED at random, shove them into a linear regression, and then act surprised. Nothing here is causal, nothing here is rigorous, and if you build a trading strategy on it, that's between you and your financial regrets. Spurious correlation is not a bug in this project; it is the entire personality.

We kicked things off Monday with the Balance on Services (lovingly tagged "DISCONTINUED," always a confidence booster) paired against the exchange rate for Belize. The raw regression coughed up a p-value just under the magic 0.05, which is the statistical equivalent of squeaking into a club because the bouncer wasn't looking. But here's the twist: once we detrended, the relationship not only survived, it flipped sign and got more significant. A result that strengthens after detrending is, by this project's low, low standards, almost suspiciously respectable. I refuse to theorize about why Belizean exchange rates would relate to the U.S. services balance, because the honest answer is "they don't," but I'll tip my hat anyway. Tuesday was the real showstopper: gasoline prices in the South versus 30-year FHA mortgage rates. Raw R-squared of 0.17, fine, whatever. Detrended? R-squared leaps to 0.63 with a p-value sporting more zeros than my savings account. That is genuinely a strong relationship that holds up in both regressions, which here counts as front-page news. Both are 1970s-90s-era prices reacting to the same inflationary mood lighting, so this one is at least plausibly not insane. Savor it. We don't get these often.

Then came Wednesday to restore the natural order. Machinery corporations' cash piles versus government-sponsored enterprise debt put up a dazzling raw R-squared of 0.80, the kind of number that makes you want to call a journalist. And then we removed the trend and the whole thing evaporated into a p-value of 0.13 and an R-squared of 0.02. Classic. Two things that both got bigger over twenty-odd years, mistaken for soulmates. This is the trend mirage in its purest, most beautiful form: an 0.80 that was 100 percent "numbers go up together." Thursday delivered the same flavor of disappointment with Sweden's government consumption price level versus Kansas City energy service prices — a tidy raw significance that collapsed into a gloriously meaningless p-value of 0.67 after detrending, because of course it did.

Friday's corporate bond index versus Mid-Atlantic unemployment did its little significant-raw dance (p around 0.009) before faceplanting at a p-value of 0.79 once the trend left the room — another mirage, correctly dunked upon. Saturday closed us out with an actual contender: Indiana property tax collections versus nonperforming loans at tiny Pacific-division banks. Negative

relationship, significant raw, and it stayed significant after detrending with a comfortably better R-squared. Is there a real mechanism connecting Indiana tax receipts to West Coast small-bank loan trouble? Almost certainly not, but I'll squint and mumble something about "broad economic health" to feel better. So the final tally: two mirages thoroughly busted, one squeaker, and three that stubbornly held up — a suspiciously good week for a project whose entire premise is that nothing should ever hold up. Please continue to draw absolutely no conclusions from any of this.

2 Date: 2026-10-12

Series ID: BOPBSVN
This series is titled Balance on Services (DISCONTINUED) and has a frequency of Quarterly. The units are Billions of Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1960-01-01 and the observation end date is 2014-01-01.The popularity of this series is 1.

Series ID: XRNCUSBZA618NRUG
This series is titled Exchange Rate (market+estimated) for Belize and has a frequency of Annual. The units are National Currency Units per US Dollar and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1970-01-01 and the observation end date is 2023-01-01.The popularity of this series is 1.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_XRNCUSBZA618NRUG	**R-squared:**	0.090
Model:	OLS	**Adj. R-squared:**	0.069

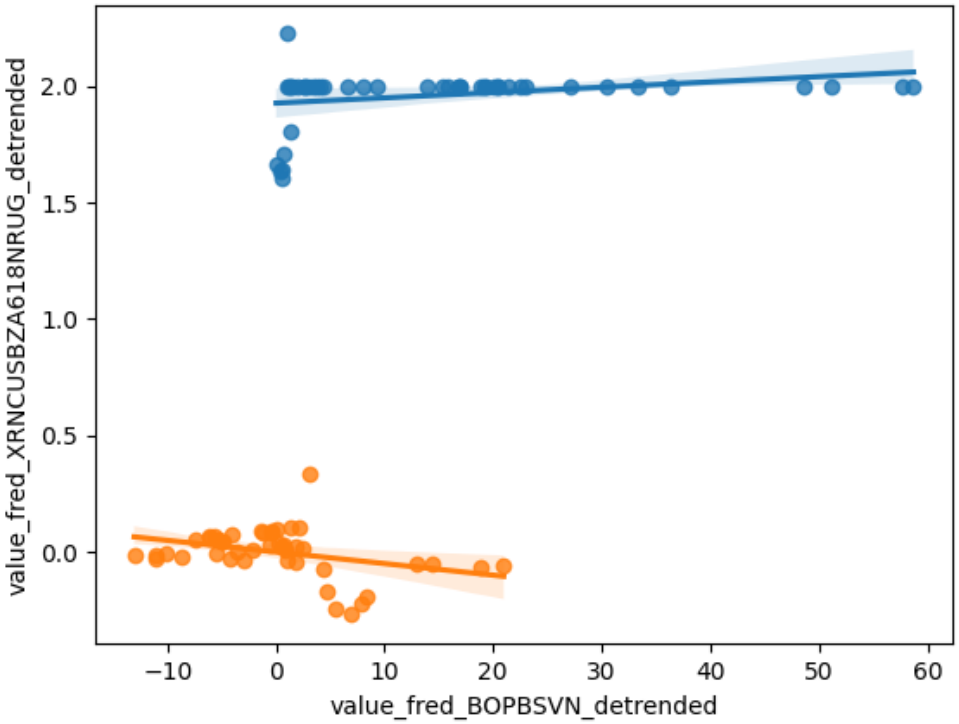

Figure 2: Detrended Regression Plot for 2026-10-12

3 Date: 2026-10-13

Series ID: APUB30074714
This series is titled Average Price: Gasoline, Unleaded Regular (Cost per Gallon/3.785 Liters) in the South Census Region - Size Class B and has a frequency of Monthly. The units are U.S. Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1978-01-01 and the observation end date is 1997-12-01.The popularity of this series is 1.

Series ID: FHA30
This series is titled 30-Year FHA Mortgage Rate: Secondary Market (DISCONTINUED) and has a frequency of Monthly. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1964-01-01 and the observation end date is 2000-06-01.The popularity of this series is 9.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_FHA30	**R-squared:**	0.169
Model:	OLS	**Adj. R-squared:**	0.165
Method:	Least Squares	**F-statistic:**	47.29
Date:	Tue, 13 Oct 2026	**Prob (F-statistic):**	5.59e-11
Time:	18:35:32	**Log-Likelihood:**	-534.79
No. Observations:	235	**AIC:**	1074.
Df Residuals:	233	**BIC:**	1081.

Omnibus:	5.577	**Durbin-Watson:**	0.209
Prob(Omnibus):	0.062	**Jarque-Bera (JB):**	5.236
Skew:	0.334	**Prob(JB):**	0.0729
Kurtosis:	3.299	**Cond. No.**	6.23

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

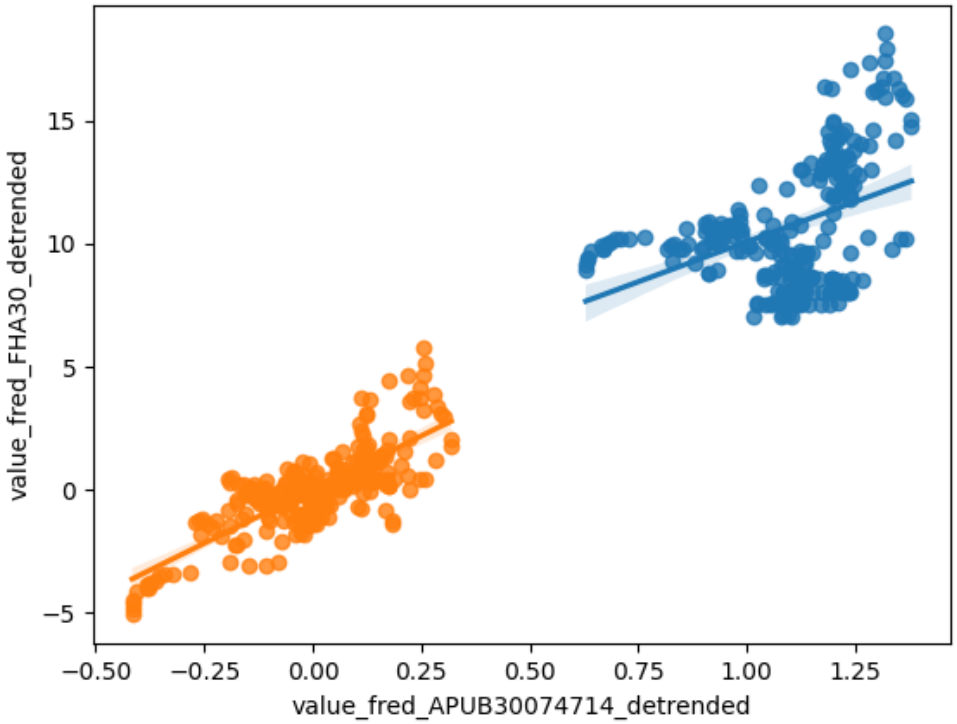

Figure 4: Detrended Regression Plot for 2026-10-13

4 Date: 2026-10-14

Series ID: QFR201333USNO
This series is titled Quarterly Financial Report: U.S. Corporations: Machinery: Cash and Demand Deposits in the U.S. and has a frequency of Quarterly. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2000-10-01 and the observation end date is 2026-04-01.The popularity of this series is 1.

Series ID: GSETCMDODFS
This series is titled Government-Sponsored Enterprises; Debt Securities and Loans; Liability, Level and has a frequency of Quarterly, End of Period. The units are Millions of U.S. Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1945-10-01 and the observation end date is 2026-04-01.The popularity of this series is 2.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_GSETCMDODFS	**R-squared:**	0.805
Model:	OLS	**Adj. R-squared:**	0.803
Method:	Least Squares	**F-statistic:**	416.8
Date:	Wed, 14 Oct 2026	**Prob (F-statistic):**	1.26e-37
Time:	16:02:51	**Log-Likelihood:**	-1578.2
No. Observations:	103	**AIC:**	3160.
Df Residuals:	101	**BIC:**	3166.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	4.816e+05	2.74e+05	1.758	0.082	-6.18e+04	1.02e+06
value_fred_QFR201333USNO	237.3381	11.626	20.415	0.000	214.276	260.400

Omnibus:	4.636	**Durbin-Watson:**	0.398
Prob(Omnibus):	0.098	**Jarque-Bera (JB):**	4.489
Skew:	-0.511	**Prob(JB):**	0.106
Kurtosis:	2.949	**Cond. No.**	5.94e+04

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.
[2] The condition number is large, 5.94e+04. This might indicate that there are strong multicollinearity or other numerical problems.

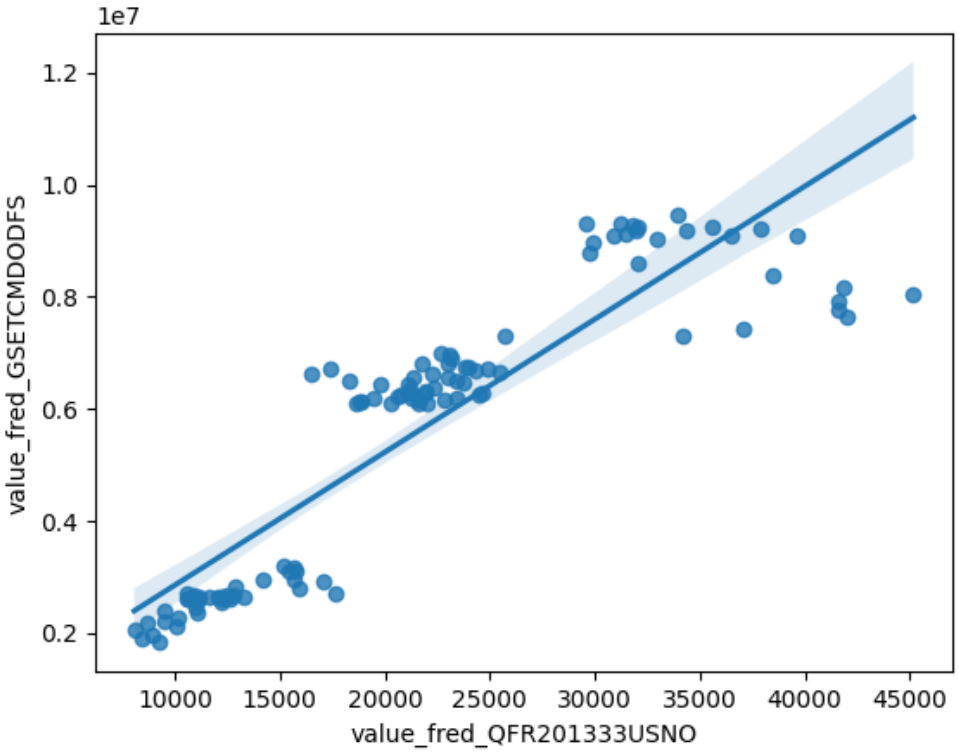

Figure 5: Raw Regression Plot for 2026-10-14

4.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_GSETCMDODFS_detrended	**R-squared:**	0.022
Model:	OLS	**Adj. R-squared:**	0.013
Method:	Least Squares	**F-statistic:**	2.317
Date:	Wed, 14 Oct 2026	**Prob (F-statistic):**	0.131
Time:	16:02:51	**Log-Likelihood:**	-1530.9
No. Observations:	103	**AIC:**	3066.
Df Residuals:	101	**BIC:**	3071.
Df Model:	1

Skew:	0.705	**Prob(JB):**	0.000237
Kurtosis:	4.378	**Cond. No.**	3.71e+03

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 3.71e+03. This might indicate that there are strong multicollinearity or other numerical problems.

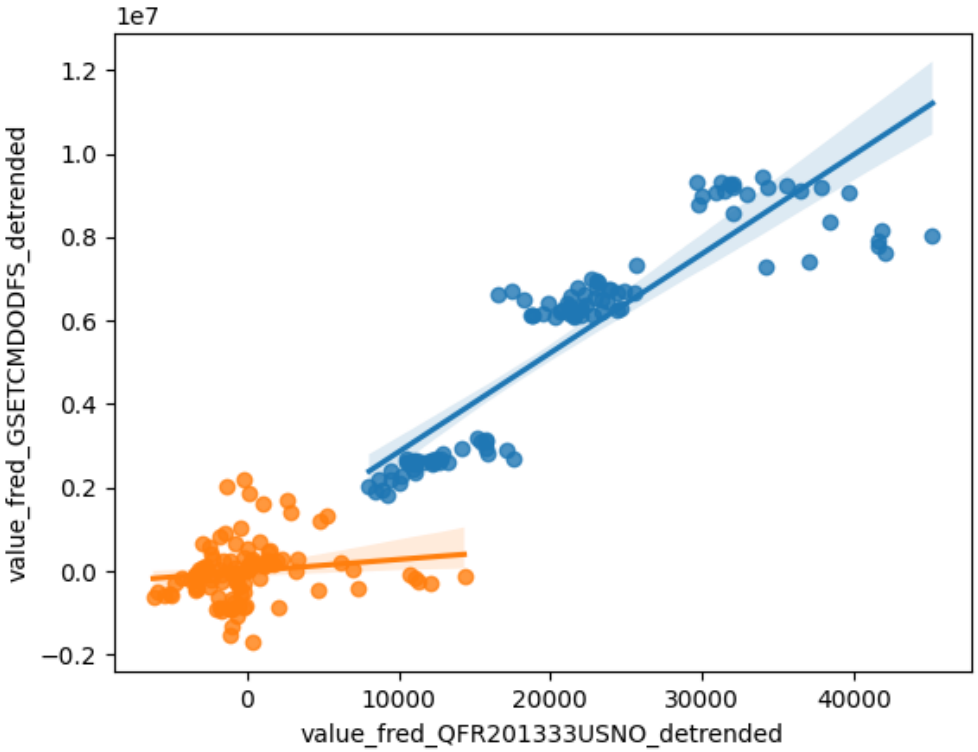

Figure 6: Detrended Regression Plot for 2026-10-14

5 Date: 2026-10-15

Series ID: PLGCPPSEA670NRUG
This series is titled Price Level of Government Consumption for Sweden and has a frequency of Annual. The units are Price Level of USA Output-side GDP in 2021=1 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1950-01-01 and the observation end date is 2023-01-01.The popularity of this series is 1.

Series ID: CUUSA214SEHF
This series is titled Consumer Price Index for All Urban Consumers: Energy Services in Kansas City, MO-KS (CMSA) (DISCONTINUED) and has a frequency of Semiannual. The units are Index 1982-1984=100 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1984-01-01 and the observation end date is 2017-07-01.The popularity of this series is 1.

5.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_CUUSA214SEHF	**R-squared:**	0.326
Model:	OLS	**Adj. R-squared:**	0.305
Method:	Least Squares	**F-statistic:**	15.50
Date:	Thu, 15 Oct 2026	**Prob (F-statistic):**	0.000418
Time:	15:51:08	**Log-Likelihood:**	-162.19

Kurtosis:	2.723	**Cond. No.**	4.30

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

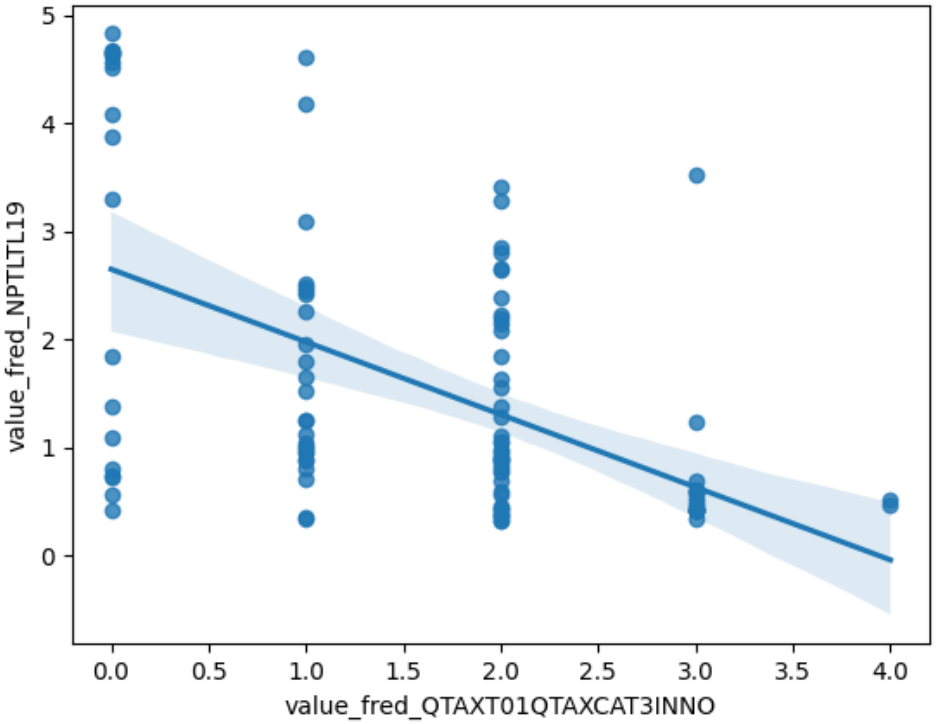

Figure 11: Raw Regression Plot for 2026-10-17

7.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_NPTLTL19_detrended	**R-squared:**	0.283
