1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly parade of numbers we have no business putting in the same room together. This week our tireless little robot reached into the FRED grab-bag five times and pulled out such crowd-pleasers as New Zealand's pandemic anxiety, American telecom construction spending, several flavors of consumer price index, discontinued bank loan rates, and — a personal favorite — the price of having a diseased circulatory system. Truly the stuff of Nobel dreams. As always, these are random pairings, so please holster any urge to build a theory of the universe out of them.

Monday kicked things off with a spectacular nothingburger: World Pandemic Uncertainty Index for New Zealand versus U.S. communication construction spending. The raw regression coughed up an R-squared of 0.008 and a p-value of 0.32, which is statistics-speak for "no, and please stop asking." The detrended version was, if anything, even more of a shrug. A refreshingly honest start — sometimes two series really do have nothing to say to each other, and I respect that.

Then Tuesday showed up and stole the entire week. Northeast core CPI versus U.S. transportation-services CPI posted a raw R-squared of 0.97, which is the kind of number that makes you nervously check whether you accidentally regressed a series against itself. But here's the shocker: it actually survived detrending, holding an R-squared of 0.84 and a p-value with twenty-three zeros in front of it. Fold me up and call me stationary — this is the rare one that holds up in both. Of course, "two different measures of consumer prices tend to move together" is roughly as earth-shattering as discovering that both my socks got wet in the rain, but by the delirious standards of this project it's a genuine standout. Wednesday's medical-services-price pairing pulled the same trick in reverse: a gorgeous 0.98 raw R-squared that vaporized to essentially zero once the shared trend was stripped out. That, dear reader, is the trend mirage in its natural habitat — two things drifting upward together, holding hands, meaning absolutely nothing.

Thursday gave us government employment-training benefits versus a heroically discontinued bank loan rate, where the raw regression found nothing (R-squared 0.004) but the detrended version squeaked out a "significant" p-value of 0.038 with a whopping 22% of variance explained — the statistical equivalent of a participation trophy, and one I'd gently ignore. Friday closed us out with Great Lakes financial-services spending versus circulatory-disease prices: a moderately impressive raw fit that, once again, evaporated after detrending. So the final tally is one relationship that survived (two price indexes being price indexes at each other) and a whole bunch of shared-drift illusions doing exactly what they always do. Remember, spurious is the house

special here — we're not proving anything, we're just enjoying the show. See you next week for more consenting-adult data we forced into a scatterplot.

2 Date: 2026-07-27

Series ID: WUPINZL

This series is titled World Pandemic Uncertainty Index for New Zealand and has a frequency of Quarterly. The units are Index and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1996-01-01 and the observation end date is 2026-01-01. The popularity of this series is 1.

Series ID: PRCMUCON

This series is titled Total Private Construction Spending: Communication in the United States and has a frequency of Monthly. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1993-01-01 and the observation end date is 2026-05-01. The popularity of this series is 1.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_PRCMUCON	R-squared:	0.008
Model:	OLS	Adj. R-squared:	-0.000
Method:	Least Squares	F-statistic:	0.9862
Date:	Mon, 27 Jul 2026	Prob (F-statistic):	0.323
Time:	14:06:59	Log-Likelihood:	-897.76
No. Observations:	121	AIC:	1800.
Df Residuals:	119	BIC:	1805.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t 	[0.025	0.975]

Omnibus:	3.754	Durbin-Watson:	0.365
Prob(Omnibus):	0.153	Jarque-Bera (JB):	2.215
Skew:	0.059	Prob(JB):	0.330
Kurtosis:	2.348	Cond. No.	3.63

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 1: Raw Regression Plot for 2026-07-27

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_PRCMUCON_detrended	R-squared:	0.005
Model:	OLS	Adj. R-squared:	-0.004
Method:	Least Squares	F-statistic:	0.5697
Date:	Mon, 27 Jul 2026	Prob (F-statistic):	0.452
Time:	14:06:59	Log-Likelihood:	-858.73
No. Observations:	121	AIC:	1721.

Figure 2: Detrended Regression Plot for 2026-07-27

3 Date: 2026-07-28

Series ID: CUUSX100SA0L1E

This series is titled Consumer Price Index for All Urban Consumers: All Items Less Food and Energy in Northeast - Size Class B/C and has a frequency of Semiannual. The units are Index Dec 1997=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1998-01-01 and the observation end date is 2026-01-01. The popularity of this series is 1.

Series ID: CWSR0000SAS4

This series is titled Consumer Price Index for All Urban Wage Earners and Clerical Workers: Transportation Services in U.S. City Average and has a frequency of Monthly. The units are Index 1982-1984=100 and the seasonal adjustment is Seasonally Adjusted. The observation start date is 1956-01-01 and the observation end date is 2026-06-01. The popularity of this series is 1.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_CWSR0000SAS4	R-squared:	0.974
Model:	OLS	Adj. R-squared:	0.973
Method:	Least Squares	F-statistic:	2037.
Date:	Tue, 28 Jul 2026	Prob (F-statistic):	3.80e-45
Time:	13:25:41	Log-Likelihood:	-227.11

Skew:	-0.345	Prob(JB):	0.251
Kurtosis:	3.828	Cond. No.	4.38

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 4: Detrended Regression Plot for 2026-07-28

4 Date: 2026-07-29

Series ID: CWUR0000SAG

This series is titled Consumer Price Index for All Urban Wage Earners and Clerical Workers: Other Goods and Services in U.S. City Average and has a frequency of Monthly. The units are Index 1982-1984=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1967-01-01 and the observation end date is 2026-06-01. The popularity of this series is 2.

Series ID: MESEPRPIHCSA

This series is titled Medical Services Expenditures by Provider Price Index and has a frequency of Annual. The units are Index 2017=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2000-01-01 and the observation end date is 2021-01-01. The popularity of this series is 3.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_MESEPRPIHCSA	R-squared:	0.981			
Model:	OLS	Adj. R-squared:	0.980			
Method:	Least Squares	F-statistic:	1020.			
Date:	Wed, 29 Jul 2026	Prob (F-statistic):	1.23e-18			
Time:	13:34:17	Log-Likelihood:	-48.503			
No. Observations:	22	AIC:	101.0			
Df Residuals:	20	BIC:	103.2			
Df Model:	1					
Covariance Type:	nonrobust					
	coef	std err	t	P> t 	[0.025	0.975]
const	4.9487	2.574	1.923	0.069	-0.421	10.318

Omnibus:	3.514	Durbin-Watson:	0.519			
Prob(Omnibus):	0.173	Jarque-Bera (JB):	2.938			
Skew:	0.861	Prob(JB):	0.230			
Kurtosis:	2.512	Cond. No.	2.09e+03			

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 5: Raw Regression Plot for 2026-07-29

[2] The condition number is large, $2.09\text{e}+03$. This might indicate that there are strong multicollinearity or other numerical problems.

4.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_MESEPRPIHCSA_detrended	R-squared:	0.000
Model:	OLS	Adj. R-squared:	-0.050
Method:	Least Squares	F-statistic:	0.001018
Date:	Wed, 29 Jul 2026	Prob (F-statistic):	0.975
Time:	13:34:17	Log-Likelihood:	-38.006
No. Observations:	22	AIC:	80.01
Df Residuals:	20	BIC:	82.19
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	1.002e-12	0.304	3.29e-12	1.000	-0.635	0.635
value_fred_CWUR0000SAG_detrended	-0.0012	0.037	-0.032	0.975	-0.078	0.076

Omnibus:	2.786	Durbin-Watson:	0.239
Prob(Omnibus):	0.248	Jarque-Bera (JB):	1.903
Skew:	0.527	Prob(JB):	0.386
Kurtosis:	2.018	Cond. No.	8.25

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 6: Detrended Regression Plot for 2026-07-29

5 Date: 2026-07-30

Series ID: B1604C1A027NBEA

This series is titled Government social benefits: to persons: State and local: Employment and training and has a frequency of Annual. The units are Billions of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1974-01-01 and the observation end date is 2024-01-01. The popularity of this series is 1.

Series ID: EEZOXSLNQ

This series is titled Weighted-Average Effective Loan Rate for Zero Interval, Other Risk (Acceptable), Large Domestic Banks (DISCONTINUED) and has a frequency of Quarterly, 2nd Month's 1st Full Week. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1997-04-01 and the observation end date is 2017-04-01. The popularity of this series is 1.

5.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_EEZOXSLNQ	R-squared:	0.004
Model:	OLS	Adj. R-squared:	-0.052
Method:	Least Squares	F-statistic:	0.06894
Date:	Thu, 30 Jul 2026	Prob (F-statistic):	0.796
Time:	13:21:13	Log-Likelihood:	-43.377
No. Observations:	20	AIC:	90.75
Df Residuals:	18	BIC:	92.75
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]

Skew:	0.851	Prob(JB):	0.290
Kurtosis:	2.731	Cond. No.	5.60

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 8: Detrended Regression Plot for 2026-07-30

6 Date: 2026-07-31

Series ID: GLAKPCEPCFININS

This series is titled Per Capita Personal Consumption Expenditures: Services: Financial Services and Insurance for Great Lakes BEA Region and has a frequency of Annual. The units are Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1997-01-01 and the observation end date is 2024-01-01. The popularity of this series is 1.

Series ID: DICISYPIMEPS

This series is titled Medical Services Expenditures by Disease: Diseases of the Circulatory System Price Index, MEPS Account Basis and has a frequency of Annual. The units are Index 2017=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2000-01-01 and the observation end date is 2021-01-01. The popularity of this series is 2.

6.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_DICISYPIMEPS	R-squared:	0.455
Model:	OLS	Adj. R-squared:	0.428
Method:	Least Squares	F-statistic:	16.70
Date:	Fri, 31 Jul 2026	Prob (F-statistic):	0.000574
Time:	13:24:03	Log-Likelihood:	-68.826
No. Observations:	22	AIC:	141.7
Df Residuals:	20	BIC:	143.8
