2.1 Raw Regression . . . . . 3

2.2 Detrended Regression . . . . . 5

# 1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

This week was a lean one on the quantity front – just a single matchup – but what a matchup it was. In the red corner, we have the OMX Copenhagen Alternative Energy Price Index, a daily measure of how Danish green-energy stocks are feeling about themselves. In the blue corner, weighing in with a frankly magnificent name, the OECD based Recession Indicators for Poland from the Peak through the Trough – a series so niche and so discontinued that it stopped reporting in 2022 and still has a popularity score of 1, which I assume means exactly one person has ever looked at it, and that person is now me. Naturally, the obvious scientific question arose: does Polish recession status have anything whatsoever to do with Danish wind turbine valuations? Let's find out, in the name of knowledge.

The raw regression came back significant, with a p-value sporting more zeros after the decimal point than I have fingers. Enormous. Historic. The kind of number that, if you squint and ignore everything you know, looks like a discovery. Except the R-squared was a humble 0.057, meaning our earth-shattering relationship explains a whopping six percent of anything, and the software itself politely interrupted to warn me about "strong multicollinearity or other numerical problems," which is computer-speak for "please don't do this."

And here is the plot twist that makes this project worth getting out of bed for: the relationship did not collapse when we stripped out the shared time trend. If anything, it got slightly stronger – the detrended R-squared nudged up to 0.071 and the coefficient held its sign and its statistical swagger. So this is not your standard-issue trend mirage, where two things both drift upward over the years and get falsely married by the math. Something in the wiggles of Danish alternative energy prices and the wiggles of Poland's recession on-off switch genuinely moves together once you remove the long-run drift. Cue dramatic gasp.

Now, before anyone drafts a central bank memo: these are two series pulled essentially at random and shoved into a regression for sport. There is no theory here, no causal story, no reason on God's green earth that a discontinued Polish recession flag should negotiate with Copenhagen solar stocks. A detrended hit like this is the rare and mildly exciting outcome, but "mildly exciting" is doing heavy lifting, and spurious correlation remains the house specialty of this entire operation. Enjoy the coincidence responsibly, and I'll be back next week to pair up two more strangers and pretend it means something.

## 2 Date: 2026-10-26

**Series ID: NASDAQCX601020PI**
This series is titled OMX Copenhagen Alternative Energy Price Index and has a frequency of Daily. The units are Index and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2008-12-30 and the observation end date is 2026-10-23.The popularity of this series is 1.

**Series ID: POLRECDM**
This series is titled OECD based Recession Indicators for Poland from the Peak through the Trough (DISCONTINUED) and has a frequency of Daily, 7-Day. The units are +1 or 0 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1995-02-01 and the observation end date is 2022-08-31.The popularity of this series is 1.

### 2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

| | | | |
|---|---|---|---|
| **Dep. Variable:** | value_fred_POLRECDM | **R-squared:** | 0.057 |
| **Model:** | OLS | **Adj. R-squared:** | 0.057 |
| **Method:** | Least Squares | **F-statistic:** | 206.4 |
| **Date:** | Mon, 26 Oct 2026 | **Prob (F-statistic):** | 1.74e-45 |
| **Time:** | 17:43:09 | **Log-Likelihood:** | -2167.1 |
| **No. Observations:** | 3419 | **AIC:** | 4338. |
| **Df Residuals:** | 3417 | **BIC:** | 4351. |
| **Df Model:** | 1 | | |
| **Covariance Type:** | nonrobust | | |

| | **coef** | **std err** | **t** | **P> \|t\|** | **[0.025** | **0.975]** |
|---|---|---|---|---|---|---|
| **const** | 0.4795 | 0.013 | 36.620 | 0.000 | 0.454 | 0.505 |
| **value_fred_NASDAQCX601020PI** | -4.034e-05 | 2.81e-06 | -14.366 | 0.000 | -4.58e-05 | -3.48e-05 |

| | | | |
|---|---|---|---|
| **Omnibus:** | 47995.954 | **Durbin-Watson:** | 0.009 |
| **Prob(Omnibus):** | 0.000 | **Jarque-Bera (JB):** | 514.195 |
| **Skew:** | 0.676 | **Prob(JB):** | 2.21e-112 |
| **Kurtosis:** | 1.665 | **Cond. No.** | 7.83e+03 |

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.
[2] The condition number is large, 7.83e+03. This might indicate that there are
strong multicollinearity or other numerical problems.

## 2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

| | | | |
|---|---|---|---|
| **Dep. Variable:** | value_fred_POLRECDM_detrended | **R-squared:** | 0.071 |
| **Model:** | OLS | **Adj. R-squared:** | 0.071 |
| **Method:** | Least Squares | **F-statistic:** | 262.7 |
| **Date:** | Mon, 26 Oct 2026 | **Prob (F-statistic):** | 5.73e-57 |
| **Time:** | 17:43:09 | **Log-Likelihood:** | -2123.7 |
| **No. Observations:** | 3419 | **AIC:** | 4251. |
| **Df Residuals:** | 3417 | **BIC:** | 4264. |
| **Df Model:** | 1 | | |
| **Covariance Type:** | nonrobust | | |

| | **coef** | **std err** | **t** | **P> \|t\|** | **[0.025** | **0.975]** |
|---|---|---|---|---|---|---|
| **const** | -2.884e-14 | 0.008 | -3.74e-12 | 1.000 | -0.015 | 0.015 |
| **value_fred_NASDAQCX601020PI_detrended** | -7.539e-05 | 4.65e-06 | -16.207 | 0.000 | -8.45e-05 | -6.63e-0 |
