1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly ritual where we throw two unrelated economic indicators into a blender, press "regress," and solemnly nod at whatever comes out. This week's contestants included a world pandemic uncertainty index for Myanmar, the price of imported household appliances, and – genuinely a highlight – how much certain Americans spend on food during out-of-town trips. Science has never been so dignified.

Monday kicked things off with the Rest of the World's debt securities versus per capita housing-and-utilities spending in the Plains region, and oh boy, did the raw regression swing for the fences. An R-squared of 0.96 – ninety-six percent! – the kind of number that makes you want to call a press conference and announce that foreign debt is secretly controlled by the heating bills of Nebraska. And then the detrended version waltzed in, stripped out the shared upward drift that both series have been doing independently since the dawn of time, and the R-squared face-planted down to 0.15. A textbook trend mirage: two things that both go up over the decades, pretending to hold hands. Classic. We hardly knew ye.

The rest of the week was a parade of statistical shrugs, which is honestly the more respectable outcome. Appliance import prices versus discontinued loan participation percentages? Nothing, p-value of 0.76, the numerical equivalent of a blank stare. Myanmar's pandemic uncertainty versus the San Francisco Tech Pulse? Also nothing, in both the raw and detrended versions, which is at least consistent of them. The out-of-town food expenditures versus loan rates mustered a mildly flirtatious raw result before completely dissolving once detrended. The only semi-spicy one was Thursday's aircraft-manufacturing wages against foreign holdings of U.S. agency bonds in the Channel Islands, which looked significant raw (p around 0.003) but then, like everyone else this week, evaporated the moment we removed the trend. Tax havens and plane-builder paychecks: it was never meant to be.

As always, the mandatory reminder that none of this means anything. These series are paired by a random number generator with no respect for economics, causality, or your time. Spurious correlation isn't the bug here – it's the entire genre. This week the detrending step did its heroic job of exposing every "exciting" finding as the trend-shaped illusion it was, and not one relationship survived into legitimately interesting territory. Which is to say: a perfectly normal week at the nonsense factory. See you next time.

2 Date: 2026-11-09

Series ID: DODFFSWCMI
This series is titled Rest of the World; Debt Securities and Loans; Liability, Level and has a frequency of Quarterly, End of Period. The units are Millions of U.S. Dollars and the seasonal adjustment is Seasonally Adjusted Annual Rate.The observation start date is 1945-10-01 and the observation end date is 2026-04-01.The popularity of this series is 15.

Series ID: PLNSPCEPCHOUSUTL
This series is titled Per Capita Personal Consumption Expenditures: Services: Housing and Utilities for Plains BEA Region and has a frequency of Annual. The units are Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1997-01-01 and the observation end date is 2025-01-01.The popularity of this series is 1.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_PLNSPCEPCHOUSUTL	**R-squared:**	0.961
Model:	OLS	**Adj. R-squared:**	0.959
Method:	Least Squares	**F-statistic:**	660.0
Date:	Mon, 09 Nov 2026	**Prob (F-statistic):**	1.64e-20
Time:	21:41:25	**Log-Likelihood:**	-207.55
No. Observations:	29	**AIC:**	419.1
Df Residuals:	27	**BIC:**	421.8
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	3193.5604	115.903	27.554	0.000	2955.747	3431.374

Omnibus:	0.836	**Durbin-Watson:**	0.483
Prob(Omnibus):	0.658	**Jarque-Bera (JB):**	0.750
Skew:	0.053	**Prob(JB):**	0.687
Kurtosis:	2.219	**Cond. No.**	7.43e+06

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

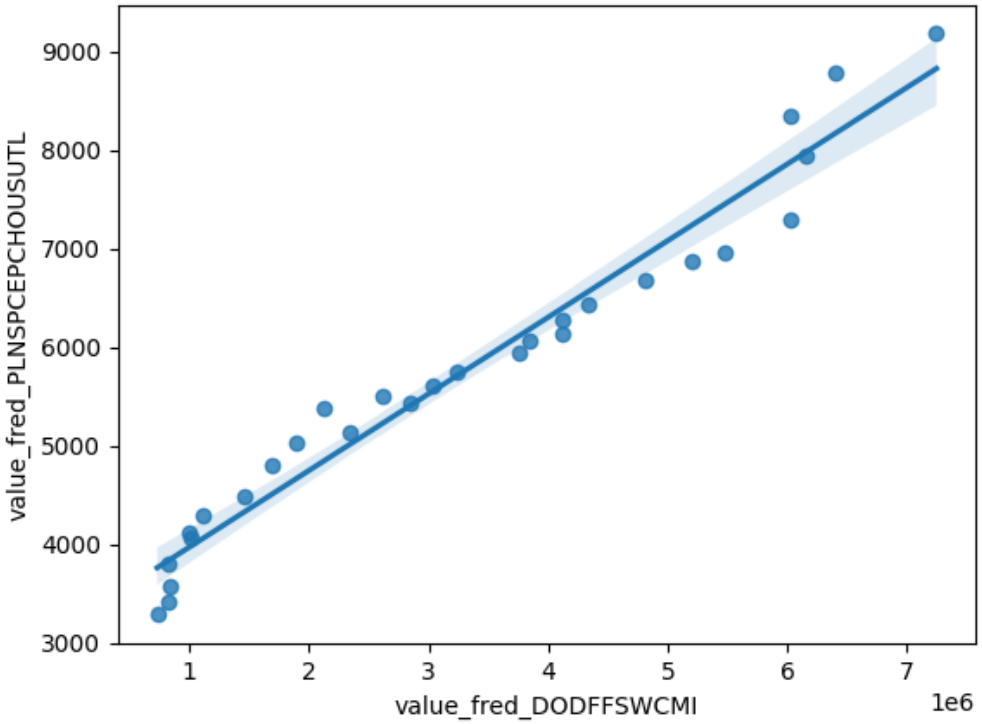

Figure 1: Raw Regression Plot for 2026-11-09

[2] The condition number is large, 7.43e+06. This might indicate that there are strong multicollinearity or other numerical problems.

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_PLNSPCEPCHOUSUTL_detrended	**R-squared:**	0.152
Model:	OLS	**Adj. R-squared:**	0.121
Method:	Least Squares	**F-statistic:**	4.857
Date:	Mon, 09 Nov 2026	**Prob (F-statistic):**	0.0363
Time:	21:41:25	**Log-Likelihood:**	-204.23
No. Observations:	29	**AIC:**	412.5

Skew:	0.409	**Prob(JB):**	0.638
Kurtosis:	2.726	**Cond. No.**	3.29e+05

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 3.29e+05. This might indicate that there are strong multicollinearity or other numerical problems.

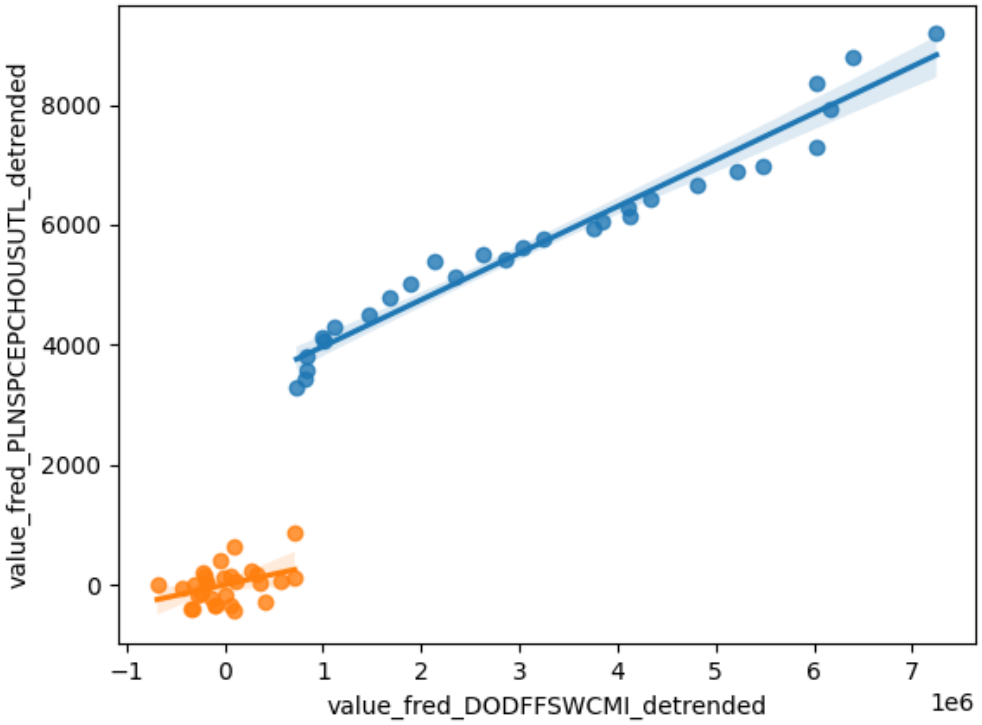

Figure 2: Detrended Regression Plot for 2026-11-09

3 Date: 2026-11-10

Series ID: EF1T99XSLNQ
This series is titled Percent of Value of Loans Made Under Participation or Syndication by Size of Loan: ($ Thousands) $10 to $99, Large Domestic Banks (DISCONTINUED) and has a frequency of Quarterly, 2nd Month's 1st Full Week. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2012-07-01 and the observation end date is 2017-04-01.The popularity of this series is 1.

Series ID: IR41030
This series is titled Import Price Index (End Use): Household Appliances and has a frequency of Monthly. The units are Index 2000=100 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1984-12-01 and the observation end date is 2026-09-01.The popularity of this series is 3.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_IR41030	**R-squared:**	0.005
Model:	OLS	**Adj. R-squared:**	-0.050
Method:	Least Squares	**F-statistic:**	0.09834
Date:	Tue, 10 Nov 2026	**Prob (F-statistic):**	0.757
Time:	18:58:16	**Log-Likelihood:**	-48.115
No. Observations:	20	**AIC:**	100.2
Df Residuals:	18	**BIC:**	102.2

Prob(Omnibus):	0.784	**Jarque-Bera (JB):**	0.071
Skew:	0.145	**Prob(JB):**	0.965
Kurtosis:	3.008	**Cond. No.**	6.86

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

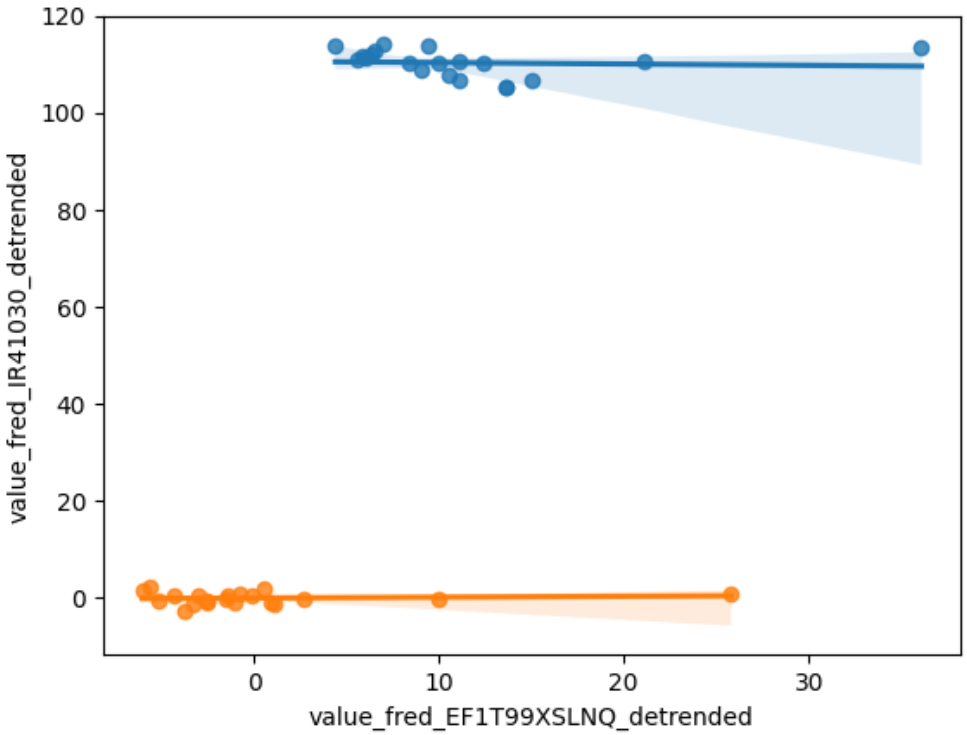

Figure 4: Detrended Regression Plot for 2026-11-10

4 Date: 2026-11-11

Series ID: WUPIMMR

This series is titled World Pandemic Uncertainty Index for Myanmar and has a frequency of Quarterly. The units are Index and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1996-01-01 and the observation end date is 2026-07-01.The popularity of this series is 1.

Series ID: SFTPINDM114SFRBSF

This series is titled San Francisco Tech Pulse (DISCONTINUED) and has a frequency of Monthly. The units are Index Jan 2000=100 and the seasonal adjustment is Seasonally Adjusted.The observation start date is 1971-04-01 and the observation end date is 2020-03-01.The popularity of this series is 9.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_SFTPINDM114SFRBSF	**R-squared:**	0.024
Model:	OLS	**Adj. R-squared:**	0.013
Method:	Least Squares	**F-statistic:**	2.309
Date:	Wed, 11 Nov 2026	**Prob (F-statistic):**	0.132
Time:	18:56:01	**Log-Likelihood:**	-381.14
No. Observations:	97	**AIC:**	766.3
Df Residuals:	95	**BIC:**	771.4
