1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly ritual where we hurl two unrelated economic series into a blender and then act shocked at whatever smoothie comes out. A short week this time, only two glorious pairings, but rest assured our commitment to statistical nonsense remains industrial-grade.

Monday served up a showdown for the ages: Danish alternative energy stock prices versus – and I cannot stress how much I did not choose this – a discontinued recession indicator for Poland. Two series that have nothing to do with each other geographically, economically, or spiritually. And yet! The raw regression came back significant, p-value with enough zeros to make you weep, clearly announcing that Copenhagen's green energy index and Polish recessions are soulmates. Except, plot twist, this one actually survived detrending. The relationship not only held up once we stripped out each series' own long-run drift, it got slightly stronger, with R-squared climbing from a dizzying six percent to a heart-pounding seven. I know, I know, contain yourselves. In the context of this project, "held up after detrending" is basically a standing ovation, so I am legally obligated to call it out as the rare interesting case. Do I think Danish solar stocks are secretly forecasting Polish downturns? No. The R-squared is still seven percent, which means ninety-three percent of the story is doing whatever it wants. But it's the closest thing to a real relationship we've seen in weeks, so we'll frame it and hang it on the wall.

Tuesday, by contrast, was a mercy killing. We paired the Export Price Index for Motor Vehicle Electrical Equipment against Chile's net transactions of U.S. long-term agency bonds, and the universe responded with a resounding "no." The raw regression had a p-value of 0.43, which is the statistical equivalent of a shrug, and the detrended version somehow did even worse at 0.90 – an R-squared so close to zero you'd need a microscope and a support group to find it. Nothing here. No trend mirage, no genuine link, just two series politely ignoring each other at the party. Honestly, refreshing. At least this one is honest about being noise.

As always, the mandatory reminder for anyone who wandered in expecting rigor: these are randomly paired series, bolted together by a script that has no idea what any of them mean, and no causal claim is being made about any of it. Spurious correlation isn't the occasional bug around here, it's the entire business model. The Denmark-Poland thing is "interesting" strictly in the sense that it didn't immediately collapse, which in this project qualifies as a miracle. Treat it accordingly: with a raised eyebrow and absolutely zero portfolio changes.

2 Date: 2026-10-26

Series ID: NASDAQCX601020PI
This series is titled OMX Copenhagen Alternative Energy Price Index and has a frequency of Daily. The units are Index and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2008-12-30 and the observation end date is 2026-10-23.The popularity of this series is 1.

Series ID: POLRECDM
This series is titled OECD based Recession Indicators for Poland from the Peak through the Trough (DISCONTINUED) and has a frequency of Daily, 7-Day. The units are +1 or 0 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1995-02-01 and the observation end date is 2022-08-31.The popularity of this series is 1.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_POLRECDM	**R-squared:**	0.057
Model:	OLS	**Adj. R-squared:**	0.057
Method:	Least Squares	**F-statistic:**	206.4
Date:	Mon, 26 Oct 2026	**Prob (F-statistic):**	1.74e-45
Time:	17:43:09	**Log-Likelihood:**	-2167.1
No. Observations:	3419	**AIC:**	4338.
Df Residuals:	3417	**BIC:**	4351.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	0.4795	0.013	36.620	0.000	0.454	0.505
value_fred_NASDAQCX601020PI	-4.034e-05	2.81e-06	-14.366	0.000	-4.58e-05	-3.48e-05

Omnibus:	47995.954	**Durbin-Watson:**	0.009
Prob(Omnibus):	0.000	**Jarque-Bera (JB):**	514.195
Skew:	0.676	**Prob(JB):**	2.21e-112
Kurtosis:	1.665	**Cond. No.**	7.83e+03

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.
[2] The condition number is large, 7.83e+03. This might indicate that there are
strong multicollinearity or other numerical problems.

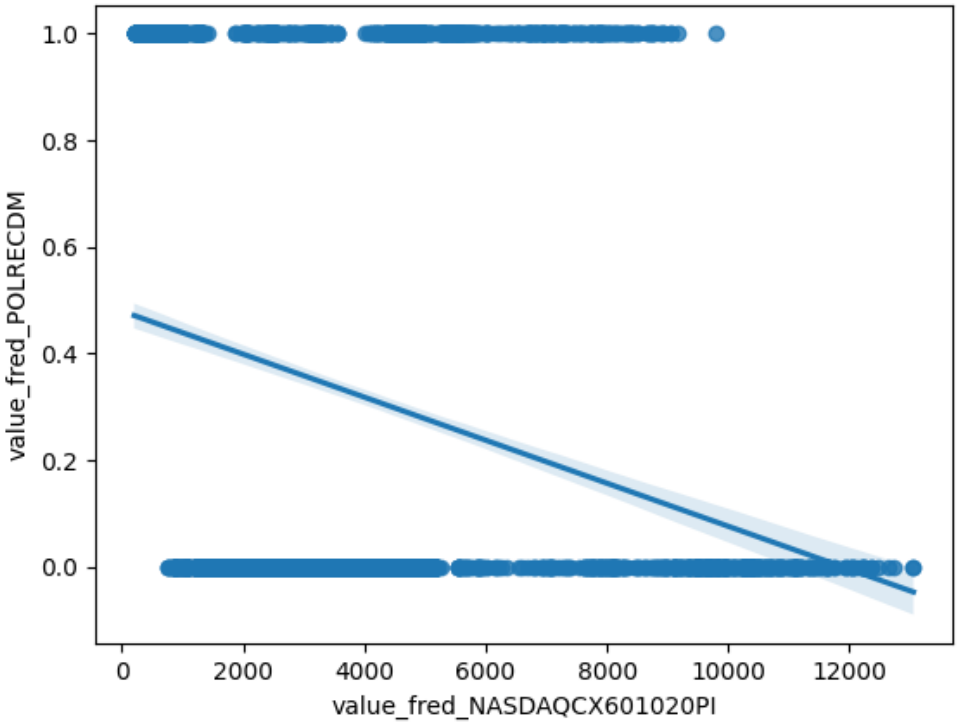

Figure 1: Raw Regression Plot for 2026-10-26

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_POLRECDM_detrended	**R-squared:**	0.071
Model:	OLS	**Adj. R-squared:**	0.071
Method:	Least Squares	**F-statistic:**	262.7
Date:	Mon, 26 Oct 2026	**Prob (F-statistic):**	5.73e-57
Time:	17:43:09	**Log-Likelihood:**	-2123.7
No. Observations:	3419	**AIC:**	4251.
Df Residuals:	3417	**BIC:**	4264.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	-2.884e-14	0.008	-3.74e-12	1.000	-0.015	0.015
value_fred_NASDAQCX601020PI_detrended	-7.539e-05	4.65e-06	-16.207	0.000	-8.45e-05	-6.63e-0

Omnibus:	113787.732	**Durbin-Watson:**	0.009
Prob(Omnibus):	0.000	**Jarque-Bera (JB):**	482.553
Skew:	0.631	**Prob(JB):**	1.64e-105
Kurtosis:	1.660	**Cond. No.**	1.66e+03

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 1.66e+03. This might indicate that there are strong multicollinearity or other numerical problems.

3 Date: 2026-10-27

Series ID: IY33632

This series is titled Export Price Index (NAICS): Motor Vehicle Electrical and Electronic Equipment Manufacturing and has a frequency of Monthly. The units are Index Dec 2008=100 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2008-12-01 and the observation end date is 2026-09-01.The popularity of this series is 1.

Series ID: FORLTAGCYNET30406

This series is titled Foreign Net Transactions of U.S. Long-Term Agency Bonds: Chile and has a frequency of Monthly. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1985-01-01 and the observation end date is 2026-08-01.The popularity of this series is 1.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_FORLTAGCYNET30406	**R-squared:**	0.003
Model:	OLS	**Adj. R-squared:**	-0.002
Method:	Least Squares	**F-statistic:**	0.6151
Date:	Tue, 27 Oct 2026	**Prob (F-statistic):**	0.434
Time:	20:06:38	**Log-Likelihood:**	-1228.3
No. Observations:	212	**AIC:**	2461.
Df Residuals:	210	**BIC:**	2467.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	76.4398	92.089	0.830	0.407	-105.098	257.978
value_fred_IY33632	-0.7484	0.954	-0.784	0.434	-2.630	1.133

Omnibus:	296.720	**Durbin-Watson:**	2.046
Prob(Omnibus):	0.000	**Jarque-Bera (JB):**	32875.754
Skew:	6.102	**Prob(JB):**	0.00
Kurtosis:	62.773	**Cond. No.**	1.62e+03

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 1.62e+03. This might indicate that there are strong multicollinearity or other numerical problems.

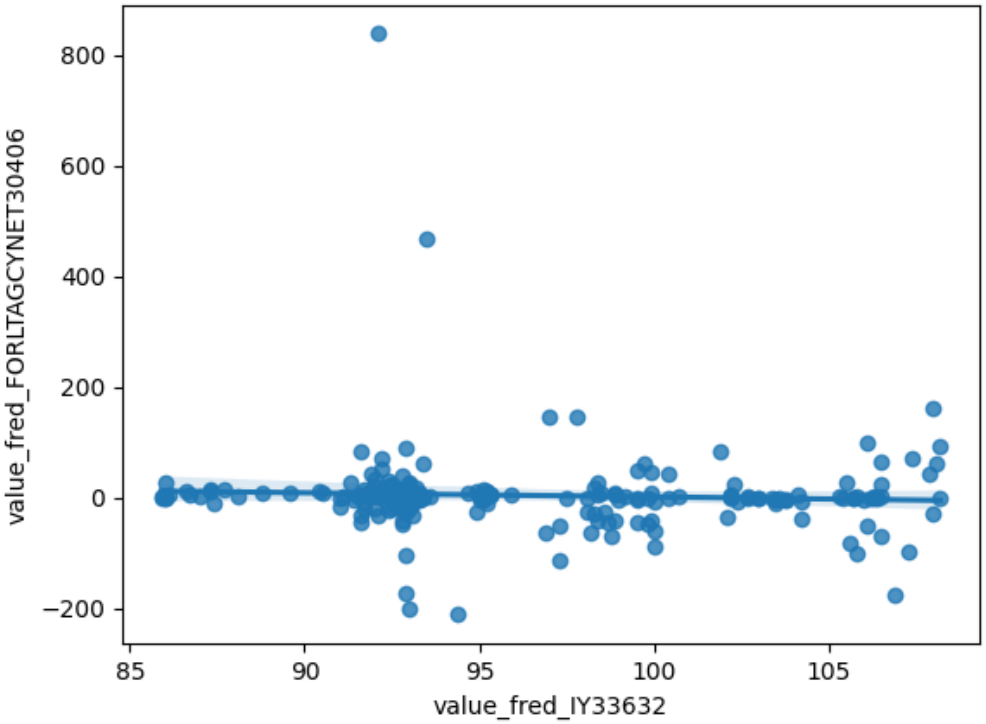

Figure 3: Raw Regression Plot for 2026-10-27

3.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_FORLTAGCYNET30406_detrended	**R-squared:**	0.000
Model:	OLS	**Adj. R-squared:**	-0.005
Method:	Least Squares	**F-statistic:**	0.01566
Date:	Tue, 27 Oct 2026	**Prob (F-statistic):**	0.901
Time:	20:06:39	**Log-Likelihood:**	-1228.1
No. Observations:	212	**AIC:**	2460.
Df Residuals:	210	**BIC:**	2467.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	1.565e-12	5.476	2.86e-13	1.000	-10.794	10.794
value_fred_IY33632_detrended	-0.1687	1.348	-0.125	0.901	-2.825	2.488

Omnibus:	295.354	**Durbin-Watson:**	2.049
Prob(Omnibus):	0.000	**Jarque-Bera (JB):**	32265.413
Skew:	6.055	**Prob(JB):**	0.00
Kurtosis:	62.212	**Cond. No.**	4.06

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.
