1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the show where we yank two completely unrelated economic time series out of a hat each day, force them to arm-wrestle in a scatterplot, and then pretend to be shocked by the outcome. This week's roster featured such natural dance partners as Great Lakes wood product GDP paired with European cell phone subscriptions, import prices for beverages and tobacco squaring off against unfilled orders for photographic equipment, and – my personal favorite – a Producer Price Index for computer training services introduced to the flow of securities at domestic finance companies. Truly the stuff of economics textbooks. Usual disclaimer, delivered with the enthusiasm of a flight attendant on their ninth leg of the day: none of these pairings mean anything, there is no causal story, and spurious correlation is not a bug here, it is the entire product.

Let's start with Monday's headline act, the wood products versus cell phones showdown. The raw regression gave a polite shrug (p-value around 0.14, nothing to write home about), but – plot twist nobody ordered – the DETRENDED version actually came out significant at the 0.02 level. So once you strip the shared march of time out of both series, Michigan sawmills and Eurasian phone plans still seem to wiggle together a little. Is this a genuine relationship? Almost certainly not, unless you think lumberjacks are furiously upgrading to 5G. But credit where it's due: it survived the detrending guillotine, which is more than I can say for our next contestant.

Ah yes, Tuesday. Behold the mighty R-squared of 0.886 between labor-income share and the number of Black Americans not in the labor force – a p-value with nineteen zeros after the decimal point, the kind of number that makes amateur analysts start drafting Nobel acceptance speeches. And then we detrend, and the R-squared face-plants from 0.89 all the way down to 0.23. This, friends, is the textbook trend mirage: two series drifting across the decades, holding hands only because time was passing for both of them. It still clings to a weak significance after detrending, but that spectacular raw number was mostly just the gravitational pull of history. Wednesday's intellectual-property imports versus durable-goods share pulled the exact same stunt – gorgeous raw p-value, then a detrended p-value of 0.44 that waved goodbye and left the building entirely.

Rounding out the week: Thursday's government imputations versus official reserve assets managed to be impressively nothing in both regressions (R-squared of 0.0009, a rounding error with ambitions), and Friday served up Mountain Census unemployment against Southwest gasoline spending, which actually held onto significance after detrending (p around 0.037) – so if you squint, maybe people drive less when the mountains are out of work. Or maybe it's noise wearing a trench coat. As always, these are random pairings tortured into charts for fun, no rigorous

claims are being made, and the only thing you should confidently conclude is that I need a hobby that produces fewer footnotes. See you next week.

2 Date: 2026-09-28

Series ID: GLAKWPMANRGSP

This series is titled Real Gross Domestic Product: Wood Product Manufacturing (321) in the Great Lakes BEA Region and has a frequency of Annual. The units are Millions of Chained 2017 Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1997-01-01 and the observation end date is 2024-01-01. The popularity of this series is 1.

Series ID: ITCELSETSP2ECS

This series is titled Mobile Cellular Subscriptions: All Income Levels in Europe and Central Asia and has a frequency of Annual. The units are Number per 100 People and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1960-01-01 and the observation end date is 2025-01-01. The popularity of this series is 1.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_ITCELSETSP2ECS	R-squared:	0.083
Model:	OLS	Adj. R-squared:	0.048
Method:	Least Squares	F-statistic:	2.357
Date:	Mon, 28 Sep 2026	Prob (F-statistic):	0.137
Time:	18:50:21	Log-Likelihood:	-142.11
No. Observations:	28	AIC:	288.2
Df Residuals:	26	BIC:	290.9
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	285.3207	123.888	2.303	0.030	30.665	539.976

Omnibus:	3.492	Durbin-Watson:	0.174
Prob(Omnibus):	0.174	Jarque-Bera (JB):	2.983
Skew:	-0.713	Prob(JB):	0.225
Kurtosis:	2.275	Cond. No.	7.63e+04

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 7.63e+04. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 1: Raw Regression Plot for 2026-09-28

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_ITCELSETSP2ECS_detrended	R-squared:	0.184
Model:	OLS	Adj. R-squared:	0.152
Method:	Least Squares	F-statistic:	5.853

Skew:	0.216	Prob(JB):	0.658
Kurtosis:	2.272	Cond. No.	285.

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 2: Detrended Regression Plot for 2026-09-28

3 Date: 2026-09-29

Series ID: W269RE1A156NBEA

This series is titled Shares of gross domestic income: Compensation of employees, paid: Wage and salary accruals: Disbursements (DISCONTINUED) and has a frequency of Annual. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1929-01-01 and the observation end date is 2011-01-01. The popularity of this series is 1.

Series ID: LNU05000006

This series is titled Not in Labor Force, Black or African American and has a frequency of Monthly. The units are Thousands of Persons and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1972-01-01 and the observation end date is 2026-08-01. The popularity of this series is 1.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_LNU05000006	R-squared:	0.886
Model:	OLS	Adj. R-squared:	0.883
Method:	Least Squares	F-statistic:	295.5
Date:	Tue, 29 Sep 2026	Prob (F-statistic):	1.63e-19

Kurtosis:	4.067	Cond. No.	1.34

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 4: Detrended Regression Plot for 2026-09-29

4 Date: 2026-09-30

Series ID: IEAMSIPN

This series is titled Imports of Services: Charges for the use of intellectual property n.i.e. and has a frequency of Quarterly. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1999-01-01 and the observation end date is 2026-04-01. The popularity of this series is 1.

Series ID: DDURRE1A156NBEA

This series is titled Shares of gross domestic product: Personal consumption expenditures: Durable goods and has a frequency of Annual. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1929-01-01 and the observation end date is 2025-01-01. The popularity of this series is 4.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_DDURRE1A156NBEA	R-squared:	0.321
Model:	OLS	Adj. R-squared:	0.294
Method:	Least Squares	F-statistic:	11.82

Kurtosis:	3.241	Cond. No.	1.77e+03			

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 1.77e+03. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 11: Raw Regression Plot for 2026-10-03

7.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_A33GUO_detrended	R-squared:	0.001
Model:	OLS	Adj. R-squared:	-0.007
Method:	Least Squares	F-statistic:	0.09245
Date:	Sat, 03 Oct 2026	Prob (F-statistic):	0.762
Time:	15:18:33	Log-Likelihood:	-929.09
No. Observations:	132	AIC:	1862.
Df Residuals:	130	BIC:	1868.
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]

Kurtosis:	3.223	Cond. No.	1.01

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 12: Detrended Regression Plot for 2026-10-03

8 Date: 2026-10-04

Series ID: CMTNURN

This series is titled Unemployment Rate in Mountain Census Division and has a frequency of Monthly. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1976-01-01 and the observation end date is 2026-08-01. The popularity of this series is 1.

Series ID: SWSTPCEGAS

This series is titled Personal Consumption Expenditures: Nondurable Goods: Gasoline and Other Energy Goods for Southwest BEA Region and has a frequency of Annual. The units are Millions of Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1997-01-01 and the observation end date is 2025-01-01. The popularity of this series is 1.

8.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_SWSTPCEGAS	R-squared:	0.010
Model:	OLS	Adj. R-squared:	-0.027
Method:	Least Squares	F-statistic:	0.2701
