1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back, fellow connoisseurs of statistical nonsense. This week our little random-pair machine dragged a truly deranged cast of characters out of the FRED basement: a Danish green-energy stock index, a discontinued Polish recession indicator, the export price of car electronics, Chilean purchases of U.S. agency bonds, auto leases, mortgage-backed securities, covered employment, house prices in multiple census divisions, child poverty in Leon County Florida, and some employment cost indices for good measure. As always, none of these things have any earthly reason to be in the same regression together, which is of course the entire point.

Monday gave us the OMX Copenhagen Alternative Energy Price Index versus Poland's recession indicator, and I am thrilled to report an R-squared of a blistering 0.06, which is to say the model explains approximately nothing. The detrended version actually crept up to 0.07, so if you squint and ignore everything about statistics, Danish solar stocks and Polish recessions have a faint, vanishingly weak, barely-there relationship that survives detrending. Hold your applause. Tuesday was the real comedy, though: car-electronics export prices versus Chilean bond transactions produced a p-value of 0.43 raw and 0.90 detrended, which in technical terms means "lol, no." Two series walked into a regression and left as total strangers. Beautiful.

Now for the trend mirages, which this project adores. Wednesday's auto-leases-versus-foreign-mortgage-securities pairing posted a jaw-dropping raw R-squared of 0.81 – gasp! clutch pearls! – and while it did survive detrending at a still-respectable 0.45, let's all remember both of these are dollar-denominated financial piles that mostly just grow over time, so "they go up together" is hardly front-page material. Thursday's covered employment versus East North Central house prices was the classic bait-and-switch: a magnificent 0.79 raw R-squared that face-planted to 0.17 once the shared upward drift got stripped out. Friday was even more damning – Leon County child poverty versus San Francisco high-tier home prices looked meaningful raw (R-squared 0.42) and then utterly evaporated to 0.006 when detrended, a p-value of 0.71 practically shrugging in your face. And Saturday's Mid-Atlantic employment versus the compensation cost index pulled the same trick: a gorgeous 0.77 raw that collapsed to a limp 0.009 detrended. Both numbers go up over the years. That's it. That's the relationship.

So the weekly scoreboard reads: two pairs that technically held up under detrending (one impressively weak, one just two financial aggregates ballooning in tandem), and three glorious trend mirages that imploded the second we asked them to prove themselves. As always, I must legally remind you that these are randomly paired economic series with zero causal story, zero hypothesis, and zero reason to be compared – spurious correlation isn't a bug here, it's the whole

brand. If you walk away from this convinced that Chilean bond flows secretly control nothing in particular, congratulations, you've understood the project perfectly. See you next week.

2 Date: 2026-10-26

Series ID: NASDAQCX601020PI
This series is titled OMX Copenhagen Alternative Energy Price Index and has a frequency of Daily. The units are Index and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2008-12-30 and the observation end date is 2026-10-23.The popularity of this series is 1.

Series ID: POLRECDM
This series is titled OECD based Recession Indicators for Poland from the Peak through the Trough (DISCONTINUED) and has a frequency of Daily, 7-Day. The units are +1 or 0 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 1995-02-01 and the observation end date is 2022-08-31.The popularity of this series is 1.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_POLRECDM	**R-squared:**	0.057
Model:	OLS	**Adj. R-squared:**	0.057
Method:	Least Squares	**F-statistic:**	206.4
Date:	Mon, 26 Oct 2026	**Prob (F-statistic):**	1.74e-45
Time:	17:43:09	**Log-Likelihood:**	-2167.1
No. Observations:	3419	**AIC:**	4338.

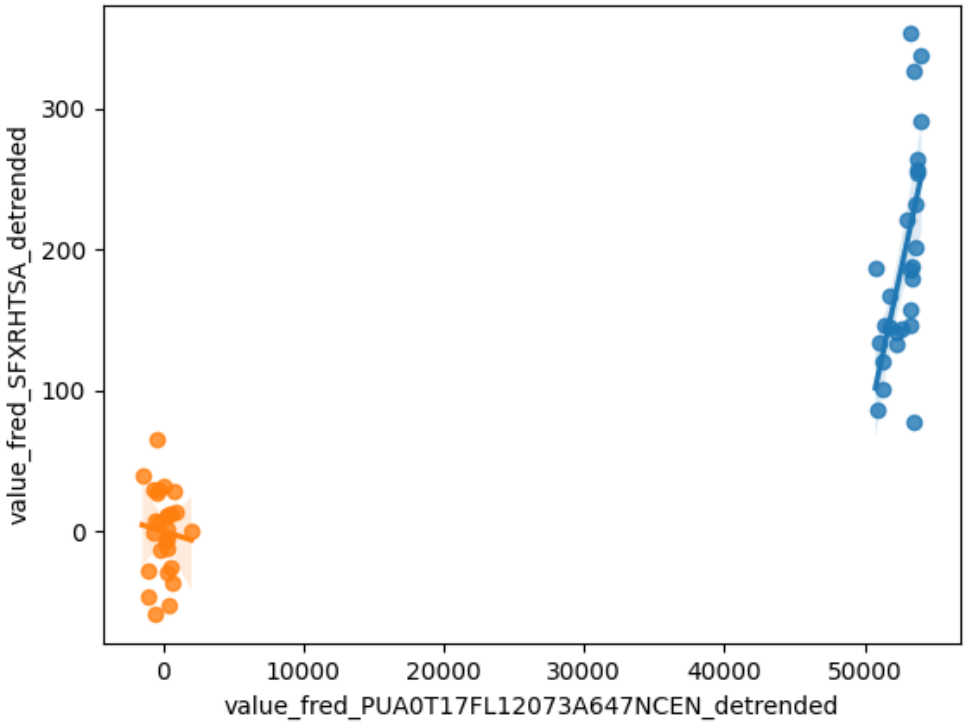

Figure 10: Detrended Regression Plot for 2026-10-30

7 Date: 2026-10-31

Series ID: ADPMCDMANERNSA
This series is titled Nonfarm Private Employment in the Middle Atlantic Census Division and has a frequency of Monthly. The units are Persons and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2010-01-01 and the observation end date is 2026-09-01.The popularity of this series is 1.

Series ID: CIU20100001000001
This series is titled Employment Cost Index: Total compensation for Private industry workers in Management, professional, and related and has a frequency of Quarterly. The units are Index Dec 2005=100 and the seasonal adjustment is Not Seasonally Adjusted.The observation start date is 2001-01-01 and the observation end date is 2026-07-01.The popularity of this series is 15.

7.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_CIU20100001000001	**R-squared:**	0.769
Model:	OLS	**Adj. R-squared:**	0.765
Method:	Least Squares	**F-statistic:**	216.4
Date:	Sat, 31 Oct 2026	**Prob (F-statistic):**	2.33e-22
Time:	16:24:36	**Log-Likelihood:**	-237.92
No. Observations:	67	**AIC:**	479.8
Df Residuals:	65	**BIC:**	484.2
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	-153.4786	19.702	-7.790	0.000	-192.827	-114.130
value_fred_ADPMCDMANERNSA	1.793e-05	1.22e-06	14.709	0.000	1.55e-05	2.04e-05

Omnibus:	3.428	**Durbin-Watson:**	0.417
Prob(Omnibus):	0.180	**Jarque-Bera (JB):**	2.519
Skew:	0.319	**Prob(JB):**	0.284
Kurtosis:	2.297	**Cond. No.**	3.04e+08

Notes:
[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.
[2] The condition number is large, 3.04e+08. This might indicate that there are
strong multicollinearity or other numerical problems.

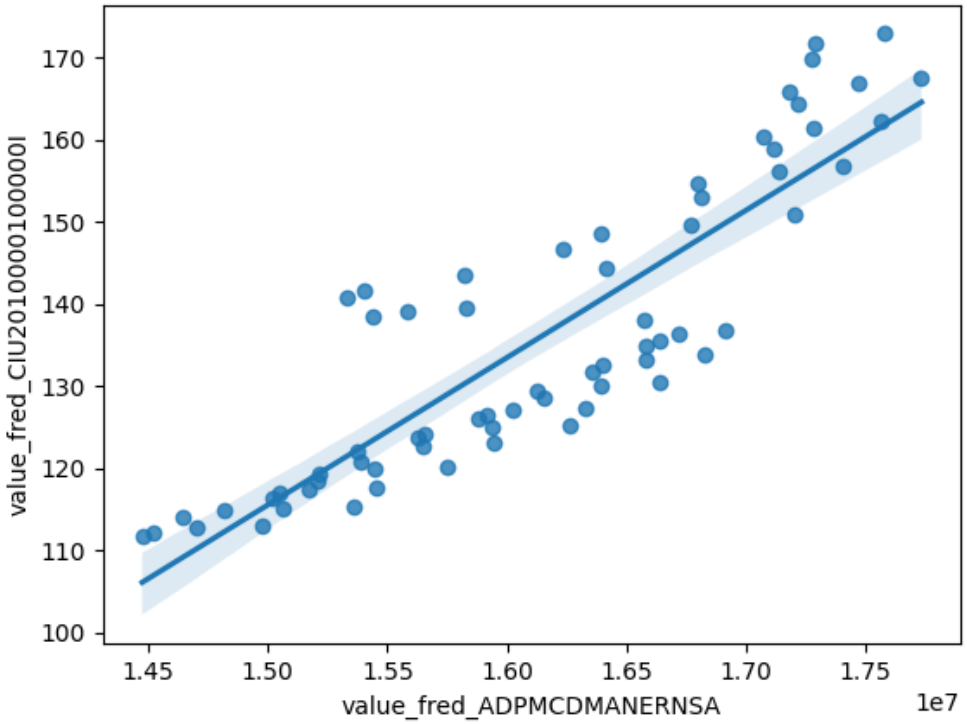

Figure 11: Raw Regression Plot for 2026-10-31

7.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_CIU2010000100000I_detrended	**R-squared:**	0.009
Model:	OLS	**Adj. R-squared:**	-0.006
Method:	Least Squares	**F-statistic:**	0.5914
Date:	Sat, 31 Oct 2026	**Prob (F-statistic):**	0.445
Time:	16:24:37	**Log-Likelihood:**	-178.49
No. Observations:	67	**AIC:**	361.0
Df Residuals:	65	**BIC:**	365.4
Df Model:	1		
Covariance Type:	nonrobust		

	coef	**std err**	**t**	**P> |t|**	**[0.025**	**0.975]**
const	1.132e-12	0.431	2.63e-12	1.000	-0.860	0.860
value_fred_ADPMCDMANERNSA_detrended	8.324e-07	1.08e-06	0.769	0.445	-1.33e-06	2.99e-06

Omnibus:	11.990	**Durbin-Watson:**	0.036
Prob(Omnibus):	0.002	**Jarque-Bera (JB):**	4.477
Skew:	0.343	**Prob(JB):**	0.107
Kurtosis:	1.936	**Cond. No.**	3.98e+05

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 3.98e+05. This might indicate that there are strong multicollinearity or other numerical problems.
