1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the weekly ritual of shoving two economic strangers into a room together and demanding they explain their relationship. As always, the machine paired these series at random, no thought or theory involved, so please adjust your expectations to "carnival fortune teller" levels before we begin. Spurious correlation isn't a risk here; it's the whole business model.

We opened Monday with Other Business Receivables Owned by Finance Companies versus a nonfarm diffusion index, and honestly, the two of them barely made eye contact. An R-squared of less than one percent and a p-value hovering around 0.10 means the raw regression already shrugged, and the detrended version shrugged in exactly the same way. No trend mirage here because there was nothing to mirage in the first place – just two series politely ignoring each other. Tuesday was even more of a non-event, because pairing a monthly auto-production seasonal factor with the annual count of reissue patents originating in Romania produced a big pile of NaNs, which is the statistical equivalent of the computer refusing to dignify the question with an answer. Frankly, relatable.

Then things got spicy. Wednesday's matchup of the San Francisco Tech Pulse against the labor force of women with master's degrees actually got MORE interesting after detrending – the R-squared climbed from about 10 percent to 14 percent, meaning this relationship survived having its shared drift surgically removed. That's the rare, respectable kind of result this project usually mocks, so I'll allow it a single dignified nod. Thursday's Employment Cost Index versus Food-at-Home CPI was the real drama queen: a jaw-dropping 95 percent R-squared in the raw regression, the kind of number that makes you want to write a manifesto. Except that's textbook shared-trend theater – two things that both march upward over decades will always look like soulmates. Once detrended, R-squared collapsed to 43 percent. Still significant, sure, but "wages and grocery prices both track inflation" is roughly the least shocking sentence ever uttered, so let's not throw a parade.

Friday's Credit Intermediation PPI versus department store retail sales was another mutual snub, insignificant both raw and detrended, which is at least honest. And Saturday closed us out with Far West health care GDP versus portfolio investment income posting a gorgeous 97 percent raw R-squared that promptly deflated to 18 percent after detrending – the classic "we only looked in love because we were both getting bigger over time" arc. The relationship technically stayed significant, but barely, and I wouldn't build a retirement plan on it. As ever, none of this means anything, no causal claims are being made, and if two random FRED series can fake a 97 percent correlation on trend alone, you should treat every headline correlation you ever see with the same

suspicious side-eye. See you next week for more numerical speed dating.

2 Date: 2026-08-24

Series ID: DTBOOXDFBANM

This series is titled Other Business Receivables Owned by Finance Companies, Flow and has a frequency of Monthly. The units are Millions of Dollars, Monthly Rate and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1980-07-01 and the observation end date is 2026-05-01. The popularity of this series is 1.

Series ID: SMS000000000000000022

This series is titled Diffusion Indexes, 3-Month Span: Total Nonfarm and has a frequency of Monthly. The units are Index and the seasonal adjustment is Seasonally Adjusted. The observation start date is 1991-01-01 and the observation end date is 2026-07-01. The popularity of this series is 17.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_SMS000000000000000022	R-squared:	0.007			
Model:	OLS	Adj. R-squared:	0.004			
Method:	Least Squares	F-statistic:	2.780			
Date:	Mon, 24 Aug 2026	Prob (F-statistic):	0.0962			
Time:	12:21:23	Log-Likelihood:	-1980.1			
No. Observations:	425	AIC:	3964.			
Df Residuals:	423	BIC:	3972.			
Df Model:	1					
Covariance Type:	nonrobust					
	coef	std err	t	P> t	[0.025	0.975]
const	76.2916	1.244	61.331	0.000	73.847	78.737

Omnibus:	115.402	Durbin-Watson:	0.217			
Prob(Omnibus):	0.000	Jarque-Bera (JB):	214.702			
Skew:	-1.569	Prob(JB):	2.39e-47			
Kurtosis:	4.511	Cond. No.	2.40e+03			

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 2.4e+03. This might indicate that there are strong multicollinearity or other numerical problems.

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_SMS00000000000000022_detrended	R-squared:	0.006
Model:	OLS	Adj. R-squared:	0.004
Method:	Least Squares	F-statistic:	2.758

Kurtosis:	4.513	Cond. No.	2.39e+03

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 2.39e+03. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 2: Detrended Regression Plot for 2026-08-24

3 Date: 2026-08-25

Series ID: G17MVSFAUTOS

This series is titled Regular Seasonal Factors: Auto Production and has a frequency of Monthly. The units are Seasonal Factor and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1996-01-01 and the observation end date is 2027-09-01. The popularity of this series is 4.

Series ID: PATENT4NROREISSUE

This series is titled U.S. Granted Patents: Reissue Patents Originating in Romania and has a frequency of Annual. The units are Number and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1993-01-01 and the observation end date is 2020-01-01. The popularity of this series is 1.

3.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_PATENT4NROREISSUE	R-squared:	nan
Model:	OLS	Adj. R-squared:	nan

Kurtosis:	nan	Cond. No.	3.92

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 4: Detrended Regression Plot for 2026-08-25

4 Date: 2026-08-26

Series ID: SFTPINDM114SFRBSF

This series is titled San Francisco Tech Pulse (DISCONTINUED) and has a frequency of Monthly. The units are Index Jan 2000=100 and the seasonal adjustment is Seasonally Adjusted. The observation start date is 1971-04-01 and the observation end date is 2020-03-01. The popularity of this series is 9.

Series ID: CGMDLW2564

This series is titled Civilian Labor Force - College Graduates - Master's Degree, 25 to 64 years, Women and has a frequency of Monthly. The units are Thousands of Persons and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2000-01-01 and the observation end date is 2026-07-01. The popularity of this series is 1.

4.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_CGMDLW2564	R-squared:	0.100
Model:	OLS	Adj. R-squared:	0.096
Method:	Least Squares	F-statistic:	26.65
Date:	Wed, 26 Aug 2026	Prob (F-statistic):	5.10e-07
Time:	12:24:10	Log-Likelihood:	-2072.8
No. Observations:	243	AIC:	4150.
Df Residuals:	241	BIC:	4157.

Skew:	0.259	Prob(JB):	0.00695
Kurtosis:	3.845	Cond. No.	11.5

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 6: Detrended Regression Plot for 2026-08-26

5 Date: 2026-08-27

Series ID: CIU2013000100000I

This series is titled Employment Cost Index: Total compensation for Private industry workers in Manufacturing; management, professional, and related occupations and has a frequency of Quarterly. The units are Index Dec 2005=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2001-01-01 and the observation end date is 2026-04-01. The popularity of this series is 3.

Series ID: CWSR0000SAF11

This series is titled Consumer Price Index for All Urban Wage Earners and Clerical Workers: Food at Home in U.S. City Average and has a frequency of Monthly. The units are Index 1982-1984=100 and the seasonal adjustment is Seasonally Adjusted. The observation start date is 1952-01-01 and the observation end date is 2026-07-01. The popularity of this series is 1.

5.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_CWSR0000SAF11	R-squared:	0.952			
Model:	OLS	Adj. R-squared:	0.951			
Method:	Least Squares	F-statistic:	1958.			
Date:	Thu, 27 Aug 2026	Prob (F-statistic):	4.92e-67			
Time:	21:22:56	Log-Likelihood:	-363.32

Kurtosis:	1.967	Cond. No.	2.53

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 8: Detrended Regression Plot for 2026-08-27

6 Date: 2026-08-28

Series ID: WPU39

This series is titled Producer Price Index by Commodity: Credit Intermediation Services (Partial) and has a frequency of Monthly. The units are Index Jun 2009=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2009-06-01 and the observation end date is 2026-07-01. The popularity of this series is 2.

Series ID: 4522MPCSMN

This series is titled Advance Retail Sales: Department Stores and has a frequency of Monthly. The units are Percent Change from Preceding Period and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1992-02-01 and the observation end date is 2026-07-01. The popularity of this series is 1.

6.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_4522MPCSMN	R-squared:	0.007			
Model:	OLS	Adj. R-squared:	0.002			
Method:	Least Squares	F-statistic:	1.349

Kurtosis:	100.065	Cond. No.	10.1

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

Figure 10: Detrended Regression Plot for 2026-08-28

7 Date: 2026-08-29

Series ID: FWSTHLTHSOCASSRGSP

This series is titled Real Gross Domestic Product: Health Care and Social Assistance (62) in the Far West BEA Region and has a frequency of Annual. The units are Millions of Chained 2017 Dollars and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1997-01-01 and the observation end date is 2025-01-01. The popularity of this series is 1.

Series ID: IEAXIP

This series is titled Primary Income Receipts: Investment income: Portfolio investment income and has a frequency of Quarterly. The units are Millions of Dollars and the seasonal adjustment is Seasonally Adjusted. The observation start date is 1999-01-01 and the observation end date is 2026-01-01. The popularity of this series is 1.

7.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_IEAXIP	R-squared:	0.966
Model:	OLS	Adj. R-squared:	0.965
Method:	Least Squares	F-statistic:	718.1
Date:	Sat, 29 Aug 2026	Prob (F-statistic):	6.19e-20
Time:	15:49:09	Log-Likelihood:	-275.36
No. Observations:	27	AIC:	554.7
Df Residuals:	25	BIC:	557.3
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	-5.329e+04	4644.132	-11.476	0.000	-6.29e+04	-4.37e+04
value_fred_FWSTHLTHSOCASSRGSP	0.5530	0.021	26.797	0.000	0.510	0.595

Omnibus:	0.189	Durbin-Watson:	1.346
Prob(Omnibus):	0.910	Jarque-Bera (JB):	0.335
Skew:	0.166	Prob(JB):	0.846
Kurtosis:	2.567	Cond. No.	8.04e+05

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 8.04e+05. This might indicate that there are strong multicollinearity or other numerical problems.

Figure 11: Raw Regression Plot for 2026-08-29

7.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_IEAXIP_detrended	R-squared:	0.177
Model:	OLS	Adj. R-squared:	0.144
Method:	Least Squares	F-statistic:	5.362
Date:	Sat, 29 Aug 2026	Prob (F-statistic):	0.0291
Time:	15:49:09	Log-Likelihood:	-272.20
No. Observations:	27	AIC:	548.4
Df Residuals:	25	BIC:	551.0
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	-1.038e-09	1156.400	-8.97e-13	1.000	-2381.651	2381.651
value_fred_FWSTHLTHSOCASSRGSP_detrended	0.2639	0.114	2.316	0.029	0.029	0.500

Omnibus:	0.703	Durbin-Watson:	1.593
Prob(Omnibus):	0.704	Jarque-Bera (JB):	0.147
Skew:	0.162	Prob(JB):	0.929
Kurtosis:	3.157	Cond. No.	1.01e+04

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

[2] The condition number is large, 1.01e+04. This might indicate that there are strong multicollinearity or other numerical problems.
