1 Weekly Summary

AI-Generated Content

The summary below was written by Claude (Anthropic) from that week's regression outputs and series descriptions. It has not been reviewed or fact-checked by a human, and should be read as an automated, informal recap – not analysis.

Welcome back to the show where we hurl randomly selected economic time series at each other and see if anything sticks. This week's contestant lineup was, frankly, a little thin – we got exactly one pairing to report on, and buckle up, because it's a real barn-burner. In the blue corner: the "Percent of Value of Loans, Small Business Administration Backed for Zero Interval, Moderate Risk, All Commercial Banks," a series so beloved it scored a popularity rating of one, and which was mercifully discontinued in 2017 like a canceled sitcom nobody watched. In the red corner: the house price index for Ft. Lauderdale-Pompano Beach-Sunrise, Florida, because why not.

So did the fate of Florida real estate hinge on moderate-risk SBA loans? I regret to inform you that it did not. The raw regression handed us an R-squared of about 0.05, which in human terms means these two series explain roughly five percent of each other and shrug about the rest. The p-value on the loan variable came in at a majestic 0.33, which is statistics-speak for "please stop looking at me." Honestly, this is refreshing. Usually the raw regression at least fakes a dramatic trend-driven crush that we get to debunk five minutes later. This time it didn't even bother pretending.

And the detrended version – our usual myth-busting hero, the one that strips out the shared drift to see if any real love remains – somehow made things marginally spicier, nudging the R-squared up to about 0.10 with a p-value of 0.18. That's still nowhere near significant, mind you, so nobody's booking a press conference, but it's the rare case where wrestling the trends out of the data made the relationship look a hair less pathetic rather than more. Don't read anything into that. I mean it. There is no universe in which zero-interval moderate-risk small business lending secretly governs Broward County home values, and if there were, we would not be the ones to discover it via a bot that grabs random FRED series before breakfast.

As always, the standing reminder: these pairings are chosen by dice, not by theory, spurious correlation is the house special here, and any relationship we find – strong, weak, or comatose like this week's – is entertainment, not evidence. Nobody regress-and-tell. See you next week, when the random number generator hopefully hands us something with more than three data points and a pulse.

2 Date: 2026-08-31

Series ID: EBZMNQ

This series is titled Percent of Value of Loans, Small Business Administration (SBA) Backed for Zero Interval, Moderate Risk, All Commercial Banks (DISCONTINUED) and has a frequency of Quarterly, 2nd Month's 1st Full Week. The units are Percent and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 2012-07-01 and the observation end date is 2017-04-01. The popularity of this series is 1.

Series ID: ATNHPIUS22744Q

This series is titled All-Transactions House Price Index for Ft. Lauderdale-Pompano Beach-Sunrise, FL (MSAD) and has a frequency of Quarterly. The units are Index 1995:Q1=100 and the seasonal adjustment is Not Seasonally Adjusted. The observation start date is 1975-10-01 and the observation end date is 2026-04-01. The popularity of this series is 14.

2.1 Raw Regression

Regresses the two series against each other directly. A significant result here can come just as easily from both series sharing a long-run trend as from any real relationship.

Dep. Variable:	value_fred_ATNHPIUS22744Q	R-squared:	0.054			
Model:	OLS	Adj. R-squared:	0.001			
Method:	Least Squares	F-statistic:	1.023			
Date:	Mon, 31 Aug 2026	Prob (F-statistic):	0.325			
Time:	18:19:31	Log-Likelihood:	-95.885			
No. Observations:	20	AIC:	195.8			
Df Residuals:	18	BIC:	197.8			
Df Model:	1					
Covariance Type:	nonrobust					
	coef	std err	t	P> t	[0.025	0.975]
const	228.2095	7.532	30.297	0.000	212.384	244.035
value_fred_EBZMNQ	-2.5123	2.484	-1.011	0.325	-7.732	2.707
Omnibus:	1.225	Durbin-Watson:	0.142			
Prob(Omnibus):	0.542	Jarque-Bera (JB):	0.944			
Skew:	-0.262	Prob(JB):	0.624			
Kurtosis:	2.073	Cond. No.	3.38			

Notes:

[1] Standard Errors assume that the covariance matrix of the errors is correctly specified.

2.2 Detrended Regression

Regresses the residuals of each series after removing its own linear time trend, so a shared trend can no longer drive the result on its own. A relationship that stays significant here is better evidence of a genuine link between the two series.

Dep. Variable:	value_fred_ATNHPIUS22744Q_detrended	R-squared:	0.096
Model:	OLS	Adj. R-squared:	0.045
Method:	Least Squares	F-statistic:	1.904
Date:	Mon, 31 Aug 2026	Prob (F-statistic):	0.185
Time:	18:19:31	Log-Likelihood:	-47.327
No. Observations:	20	AIC:	98.65
Df Residuals:	18	BIC:	100.6
Df Model:	1		
Covariance Type:	nonrobust		

	coef	std err	t	P> t	[0.025	0.975]
const	-1.994e-11	0.608	-3.28e-11	1.000	-1.277	1.277
value_fred_EBZMNQ_detrended	-0.3090	0.224	-1.380	0.185	-0.780	0.162

Omnibus:	1.101	Durbin-Watson:	0.883
Prob(Omnibus):	0.577	Jarque-Bera (JB):	0.608
Skew:	-0.424	Prob(JB):	0.738
Kurtosis:	2.893	Cond. No.	2.71

Notes:
